Environmental Security Approaches And Issues:

Environmental Security Rita Floyd, Richard A. Matthew, 2013 Economic development population growth and poor resource management have combined to alter the planet's natural environment in dramatic and alarming ways. For over twenty years, considerable research and debate have focused on clarifying or disputing linkages between various forms of environmental change and various understandings of security. At one extreme lie sceptics who contend that the linkages are weak or even non-existent; they are simply attempts to harness the resources of the security arena to an environmental agenda. At the other extreme lie those who believe that these linkages may be the most important drivers of security in the 21st century; indeed, the very future of humankind may be at stake. This book brings together contributions from a range of disciplines to present a critical and comprehensive overview of the research and debate linking environmental factors to security. It provides a framework for representing and understanding key areas of intellectual convergence and disagreement, clarifying achievements of the research as well as identifying its weaknesses and gaps. Part I explores the various ways environmental change and security have been linked and provides principal critiques of this linkage. Part II explores the linkage through analysis of key issue areas such as climate change, energy, water, food, population and development. Finally, the book concludes with a discussion of the value of this subfield of security studies and with some ideas about the questions it might profitably address in the future. This volume is the first to provide a comprehensive overview of the field. With contributions from around the world, it combines established and emerging scholars to offer a platform for the next wave of research and policy activity. It is invaluable for both students and practitioners interested in international relations, environment studies and human geography.

Environmental Security Rita Floyd, Richard Matthew, 2025-12-15 This book offers a comprehensive survey of the distinctive theoretical approaches, fundamental issues and key actors that are central to the contemporary field of environmental security studies. Through a series of chapters written by leading experts, this volume provides readers with an overview of environmental security studies, an arena of considerable policy and research attention that has evolved quickly over the past several decades. The relationships linking climate change, biodiversity loss and pollution to different ways of thinking about and optimizing security are broadly relevant, complex and intensifying. Contributors to this volume provide authoritative analyses of competing and complementary theoretical approaches, key issues including food, water and energy, and the actions and aspirations of multilateral, national and sub-national actors. This book has been carefully designed to benefit anyone interested in environmental and climate security. It is especially valuable as required reading for students at both undergraduate and postgraduate levels. Beyond that, it serves as a reliable resource for established researchers in the field as well as advocates, policymakers, security professionals, climate change and other environmentalists and members of the public.

Environmental Security in the Anthropocene Judith Nora Hardt, 2017-09-22 This book provides a critical assessment of the theories and practice of environmental security in the context of the

Anthropocene The work analyses the intellectual foundations the evolution and different interpretations strengths and potential of the link between environment and security but also its weaknesses incoherencies and distortions To do so it employs a critical environmental security studies analytical framework and uniquely places this analysis within the context of the Anthropocene Furthermore the book examines the practice theory divide and the political implementation of the environmental security concept in response to global environmental change and in relation to different actors It pays significant attention to the Environment and Security Initiative ENVSEC which is led by different programs of the United Nations the OSCE and until recently by the North Atlantic Treaty Organization NATO among others and has largely been overlooked in the academic literature to date The goal is to study how environmental security practice could inform and shape the environmental security theory and also to explore how conversely new theoretical insights could contribute to the enhancement of environmental security activities This book will be of great interest to students and academic scholars of Environmental Security Critical Security Studies Green Political Theory Global Governance and International Relations in general

Environmental Security Richard A. Matthew, 2015 The literature compiled in this four volume collection explores the real and potential linkages between environmental change and security Early formulations of environmental security date to antiquity whilst contemporary formulations of environment conflict peace

linkages grew in part from the environmental movement of the 1960s and 1970s The ensuing flood of academic enquiry has been diverse and extensive and the objective of this major work is to organize this important but polysemous literature in order to provide a comprehensive Environmental Security in Greece Charis (Harris) Gerosideris,2021-11-10

Environmental Security in Greece establishes stakeholders perceptions of environmental security and energy security taking a Q methodology and Digital Media Research Framework approach In depth individual viewpoints and opinions of policymakers energy industry leaders NGOs members and the public are described throughout Environmental Security and Gender Nicole Detraz,2014-08-21 Over the past 20 years scholars policymakers and the media have increasingly recognized the links between both traditional and non traditional security issues and the changing condition of the global environment Concepts such as environmental security and resource conflict have been used to hint at these significant linkages While there has been a good deal of scholarly work conducted that seeks to identify the ways that actors link these concepts there has been little examination of the intersection between approaches to environmental security and gender This book explores this intersection to provide an insight into the gendered nature of both global environmental politics and security studies It examines how the issues of security and the environment are linked to theory and practice and the extent to which gender informs these discussions By adopting a feminist environmental security discourse this book provides crucial redefinitions of key concepts and offers new insights into the ways we understand security environment connections Case studies evaluate if and how environment and security discourses are being used to understand a range of environmental issues and how a feminist environmental security discourse contributes to our understanding of security environment connections This multidisciplinary volume draws on literature from the environmental sciences security studies and sociology to highlight the complex human insecurities that often accompany environmental change As conceptualizations of security continue to shift and broaden to include environmental issues and concerns it is imperative that gender informs the debate

The Environmental Dimension of Asian Security In-t'aek Hyŏn,Miranda Alice Schreurs,2007 Northeast Asia is a region with highly disparate levels of industrialization and political systems It also contains some very troubling security flashpoints the Taiwan Strait the Korean Peninsula and the East China Sea China s rapacious quest for energy and rapid industrial expansion have led to intense international competition with Japan and the United States and internal instability as well North Korea poses two distinct environmental security threats famine refugees and the regime s use of nuclear blackmail for subsidized energy Yet there is very little regional cooperation despite the need to manage disputes over energy natural resources and pervasive pollution The Environmental Dimension of Asian Security examines these issues through a regional environmental security complex that explores the potential for greater intersubjective understandings of regional environmental and natural resource problems and greater institutional collaboration and management **The International Politics of the Environment** Andrew Hurrell,Benedict Kingsbury,1992 This book brings together leading

specialists to assess the strengths limitations and potential of the international political system for global environmental management **Digest** ,2004 **Environment, Poverty, Conflict** Dan Smith,International Peace Research Institute,1994 *Transnational Water Resource Management and Environmental Security* James B. Working Party on Economic and Environmental Policy Integration,1999 **International Peace Research Newsletter** ,1994 *The Oceans and Environmental Security* James Broadus,Rafaël' Vramovich Vartanov,1994-11 Human ecology is an emerging discipline that studies the interrelationships between humans and their environment drawing on insights from biology sociology anthropology geography engineering architecture landscape architecture planning and conservation While a vast multidisciplinary literature underscores this approach until now no one has synthesized the work of diverse sometimes divergent scholars to illustrate how human interactions can be understood as ecological relationships using hierarchy as an organizing device In *Human Ecology* noted landscape planner Frederick Steiner builds on the work of leading thinkers including Christopher Alexander William Cronon Clifford Geertz James Lovelock Eugene Odum Paul Shepard Anne Whiston Spirn E O Wilson Gerald Young and many others to present a historical and analytical examination of how humans interact with each other as well as with other organisms and their surroundings The first two chapters summarize the development of this new ecology and the theory of human ecology The remainder of the book provides an accessible introduction to the major elements of human ecological theory including language culture and technology structure function and change edges and boundaries interaction integration and institution diversity and adaptation The chapters are organized hierarchically from the smallest scale to the largest with each chapter addressing a specific level as an ecosystem The final chapter probes some of the ethical implications of this new field Human Ecology brings together for the first time scholarship from the social and natural sciences as well as the environmental design arts to offer an overview of the field of human ecology and to show how the field may help us to envision our futures While the approach is largely theoretical it has broad policy and practical implications and represents an important new work for anyone concerned with interactions between humans and the environment **Global Security, the Number One Dilemma of the World Community: the Case of the United States** Jean Cédric Obame Emame,2018-02-26 Doctoral Thesis Dissertation from the year 2018 in the subject Politics Topic Peace and Conflict Security grade A Atlantic International University course Doctor of International Relations with a major in International Security language English abstract This paper is an attempt to deconstruct the concept of security which has been by tradition exclusively confined to the military realm We make evident that security takes into consideration a number of fields and that its major concern is the human person In addressing security in this work we do not only refer to the security of states the concept of national security but also to that of individuals human security Governments should integrate in their security agendas not only their own security but also the security of their nationals Accordingly this implies

that they should protect their citizens against any threat to human life In other words governments or the people they rule do not merely face military threats from other states they are as well endangered by other threats to their security these threats are debated in this research paper We do not mean that military issues are not to be conceptualized within security frameworks but we do contend that they are not the unique issues to be securitized Indeed this paper displays that other issues should be securitized

Environmental Security in South Asia R. B. Jain, 2003-01-01 L'Asie du Sud est devenue une région d'une grande importance stratégique le conflit indo pakistanais le rôle du Pakistan dans la lutte contre le terrorisme l'influence de l'islamisme dans les décisions publiques etc Cependant les problèmes environnementaux risquent d'accroître l'insécurité de ces pays et par là les risques de conflits entre eux L'interaction entre le sous-développement et la dégradation de l'environnement peut conduire une intensification des rivalités géopolitiques et idéologiques dans la région

Environmental Policy with Political and Economic Integration John B. Braden, Henk Folmer, Thomas Ulen, 1996 Issues discussed include the regulation of agricultural pollution global warming ozone pollution and environmental security

International Boundaries and Environmental Security: Frameworks for Regional Cooperation Gerald Blake, 1997-08-15 Are international boundaries necessarily an obstacle to effective environmental management the ever increasing competition between states for access to natural resources may represent a threat not only to ecological stability but to regional and even global security Or perhaps transboundary environmental issues can actually have a positive impact on international relations encouraging states to cooperate and building confidence between previously hostile neighbours Drawing on a wide range of case studies The papers in this volume explore these important issues from a multi disciplinary perspective Contributions from practitioners and technical experts complement detailed studies by geographers lawyers and political scientists This mix yields a unique survey of 1 problems when environmental systems cross international borders and 2 transboundary cooperative projects designed to reduce the threat of ecological catastrophe and political conflict between competing neighbours around the world The conclusion Despite the daunting challenges there exist grounds for optimism This collection is based on the proceedings of an international conference held in Singapore in June 1995 co hosted by the Centre for Advanced Studies And The Department of Geography National University of Singapore And The International Boundaries Research Unit University of Durham United Kingdom and is essential reading for anyone interested in understanding the complex relationship between boundaries environment and international security
