with many choices Do nucleic acid probes non instrumental ELISA techniques or time resolved fluorometry have a place in his or her laboratory Should the laboratory test for newly described human pathogens such as human immunodeficiency virus or human papilloma virus Can rapid techniques supplant conventional methods Or are they merely adjunctive This symposium attempted to assist in the formulation of informed decisions Bruce Kleger Donald Jungkind Eileen Rinks Linda A Miller vii ACKNOWLEDGEMENTS We would like to thank the Eastern Pennsylvania Branch of the American Society for Microbiology for sponsoring this symposium and for making this publication possible We especially thank the Symposium Committee for their diligent work in organizing an informative and successful symposium **Clinical Chemistry:**

Microbiology Yi-Wei Tang, Charles W. Stratton, 2012-09-13 In the United States hospitals annually report over 5 million cases of infectious disease related illnesses clinical microbiology laboratories in these hospitals are engaged in detecting and identifying the pathogenic microorganisms in clinical specimens collected from these patients with suspected infections Clearly the timely and accurate detection identification of these microbial pathogens is critical for patient treatment decisions and outcomes for millions of patients each year Despite an appreciation that the outcome of an infectious disease related illness is directly related to the time required to detect and identify a microbial pathogen clinical microbiology laboratories in the United States as well as worldwide have long been hampered by traditional culture based assays which may require prolonged incubation time for slowly growing microorganisms such as *Mycobacterium tuberculosis* Moreover traditional culture based assays often require multiple steps with additional time needed for discernment of species and or detection of antimicrobial resistance Finally these traditional slow multistep culture based assays are labor intensive and

required skilled clinical microbiologists at the bench Over the past several decades advanced molecular techniques in diagnostic microbiology quietly have been revolutionizing the practice of clinical microbiology in the hospital setting Indeed molecular diagnostic testing in general and nucleic acid based amplification methods in particular have been heralded as diagnostic tools for the new millennium There is no question that the development of rapid molecular techniques for nucleic acid amplification characterization combined with automation and user friendly software has greatly broadened the diagnostic capabilities of the clinical microbiology laboratory These technical advances in molecular microbiology over the first decade of the 21st Century have profoundly influenced the physical structure of clinical microbiology laboratories as well as their staffing patterns workflow and turnaround time These molecular microbiology advances have also resulted in the need for a revised and updated second edition of Advanced Techniques in Diagnostic Microbiology This second edition again provides an updated and comprehensive description of the ongoing evolution of molecular methods for the diagnosis of infectious diseases In addition many new chapters have been added including a chapter on the clinical interpretation and relevance of advanced technique results The second edition like the first edition includes both a techniques section describing the latest molecular techniques and an applications section describing how these advanced molecular techniques are being used in the clinical setting Finally the second edition like the first edition utilizes a diverse team of authors who have compiled chapters that provide the reader with comprehensive and useable information on advanced molecular microbiology techniques
