Green Consensus and High Quality Development CCICED,2022-01-01 This open access book is based on the research outputs of China Council for International Cooperation on Environment and Development CCICED in 2020 It covers major topics of Chinese and international attention regarding green development such as climate biodiversity ocean BRI urbanization sustainable production and consumption technology finance value chain and so on It also looks at the progress of China s environmental and development policies and the impacts from CCICED This is a highly informative and carefully presented book providing insight for policy makers in environmental issues **Eco-Homes** Doctor Jenny

Pickerill,2016-01-15 It is widely understood that good affordable eco housing needs to be at the heart of any attempt to mitigate or adapt to climate change This is the first book to comprehensively explore eco housing from a geographical social and political perspective It starts from the premise that we already know how to build good eco houses and we already have the technology to retrofit existing housing Despite this relatively few eco houses are being built Featuring over thirty case studies of eco housing in Britain Spain Thailand Argentina and the United States Eco Homes examines the ways in which radical changes to our houses such as making them more temporary using natural materials or relying on manual heating and ventilation systems require changes in how we live As such it argues it is not lack of technology or political will that is holding us back from responding to climate change but deep rooted cultural and social understandings of our way of life and what we expect our houses to do for us An Integrated Approach to Environmental Management Dibyendu Sarkar,Rupali

Datta,Avinandan Mukherjee,Robyn Hannigan,2015-11-02 Covers the most recent topics in the field of environmental management and provides a broad focus on the theoretical and methodological underpinnings of environmental management Provides an up to date survey of the field from the perspective of different disciplines Covers the topic of environmental management from multiple perspectives namely natural sciences engineering business social sciences and methods and tools perspectives Combines both academic rigor and practical approach through literature reviews and theories and examples and case studies from diverse geographic areas and policy domains Explores local and global issues of environmental management and analyzes the role of various contributors in the environmental management process Chapter contents are appropriately demonstrated with numerous pictures charts graphs and tables and accompanied by a detailed reference list for further readings

Low Energy Low Carbon Architecture Khaled Al-Sallal,2016-05-05 Providing a complete and in depth overview of the available knowledge in the area of low energy and low carbon architecture The scope of this edited book includes several important topics ranging from chapters giving a broad view of the progressing models in ecologically responsible environments to other chapters focussing on recent advances in design strategies and building technologies in low energy heating cooling daylighting materials and building sustainable systems The book will give the readers insight to the future of low energy and low carbon architecture in the beyond green era and discussed in the broader context of the

progressing theories of regenerative design **Low Energy Low Carbon Architecture** Khaled A. Al-Sallal, 2016
Architectural Record , Planning , 2008 **The Canadian Architect** , 2000 Trade, Climate Change and Sustainable Development Moustapha Kamal Gueye, Malena Sell, Janet R. Strachan, 2009 Responding to climate change is a global challenge with significant implications for small developing countries Debate on how trade policy can mitigate the effects of climate change has so far centred on developed countries and the large emerging economies especially China Brazil and India but what are the implications for small and vulnerable economies SVEs least developed countries LDCs and small island developing states SIDS These countries are the most vulnerable to the effects of climate change but they are least equipped to deal with changes in trade policy Trade Climate Change and Sustainable Development examines the opportunities and multiple large scale challenges they face in adapting key trade sectors to the impact climate change addressing climate change measures and furthering their own trade capacity and competitiveness in the global market This book is the result of a joint project between the Commonwealth Secretariat and the International Centre for Trade and Sustainable Development Geneva It will be of interest to policy makers and anyone who wants to gain a clear understanding of the implications of climate change on the economies of smaller developing states BOOK PUBLISHER WEBSITE **Cities, Towns & Renewable Energy** Organisation for Economic Co-operation and Development, 2009 This book includes several case studies chosen to illustrate how enhanced deployment of renewable energy projects can result from local policy regardless of a community's size or location Research Gap Analysis for Zero-net Energy Buildings Smita Gupta, Jeremy Smith, Itron, Inc, 2019 **Low Energy Architecture and Low Carbon Cities** Francesco Pomponi, Bernardino D'Amico, 2020-12-04 The built environment is at a turning point With projected trends in population growth and urbanization global demand for new floor area is expected to rise sharply This will put unprecedented pressure on the availability of natural resources and incur greenhouse gas emissions and energy demand Such environmental stressors risk driving the world away from the UN Sustainable Development Goals but equally represent an opportunity for just sustainability transitions The contents of this book aim to address some of these grand challenges from a multi disciplinary perspective Low energy architecture low carbon cities and the often forgotten sustainability of refugee settlements are some of the themes dealt with by the authors Euro Abstracts , 2003 **Automotive Engineering International** , 2007 RIBA Journal , 1993 **The New Carbon Architecture** Bruce King, 2017-12-05 Soak up carbon into beautiful healthy buildings that heal the climate Green buildings that slash energy use and carbon emissions are all the rage but they aren't enough The hidden culprit is embodied carbon the carbon emitted when materials are mined manufactured and transported comprising some 10% of global emissions With the built environment doubling by 2030 buildings are a carbon juggernaut threatening to overwhelm the climate It doesn't have to be this way Like never before in history buildings can become part of the climate solution With biomimicry and innovation we can pull huge amounts of carbon out of the atmosphere and lock it up as walls

roofs foundations and insulation We can literally make buildings out of the sky with a massive positive impact The New Carbon Architecture is a paradigm shifting tour of the innovations in architecture and construction that are making this happen Office towers built from advanced wood products affordable low carbon concrete alternatives plastic cleaned from the oceans and turned into building blocks We can even grow insulation from mycelium A tour de force by the leaders in the field The New Carbon Architecture will fire the imagination of architects engineers builders policy makers and everyone else captivated by the possibility of architecture to heal the climate and produce safer healthier and more beautiful buildings

A Deeper Shade of Green Johann Bernhardt, 2008 It is estimated that the building sector uses roughly half of all the energy generated in this country a very high proportion of materials and creates huge volumes of landfill wastes This means that to make a difference we need to look at how we build how we can reduce energy use and costs how we future proof our buildings and minimise their carbon footprint This book is the first comprehensive step in providing assistance for all of us to make a difference to our environment and to lead more comfortable cost efficient and sustainable lives within the buildings we inhabit *PCI Journal*, 2008 **Research EU.**, 2008 *Carbon-Neutral Architectural Design* Pablo M. La Roche, 2024-05-31 The energy used to build and operate buildings is a significant source of greenhouse gas emissions While it is possible to reduce emissions through low carbon design many architects are not trained to do this Filling an urgent need for a design reference in this emerging field this book describes how to reduce building related greenhouse gas emissions through appropriate design techniques It presents strategies to achieve CO2 reductions with an emphasis on control of energy flows through the building envelope and passive cooling and heating strategies This new revised edition is updated throughout and includes a new section on embodied carbon and new chapters on daylighting and nature based cooling Features Adds new chapters on daylighting and nature based cooling with numerous updates throughout the rest of the chapters Presents strategies illustrated with examples for new construction and existing buildings to reduce energy consumption and reduce emissions Explains the origins of CO2 emissions associated with the operation and fabrication of buildings supplying water disposing of waste from the building and proposes strategies to reduce them Covers carbon calculations thermal comfort indigenous technology climate responsive design passive cooling and heating solar design air flow analysis daylighting building simulation and microclimate design with abundant examples Examines siting location to design buildings that adapt and mitigate their effect on climate change
