**FUNDAMENTAL CONCEPTS**

**1. What are the main dimensions of a rotating machine?**

Armature or rotor diameter

Stator core length

**2. Define specific magnetic loading**

It is defined as the ratio of total flux around the air gap and the area of flux path at the air gap.

**3. Define specific electric loading.**

It is defined as the ratio of total number of ampere conductors and the armature periphery at the air gap.

**4. What is magnetic circuit?**

It is the path of magnetic flux. The mmf of the circuit creates flux in the path by overcoming the reluctance of the path.

**5. What is leakage flux?**

It is the flux passing through unwanted path. The leakage flux will not help either for transfer or conversion of energy.

**6. What is leakage coefficient?**

It is defined as the ratio of total flux to useful flux.

**7. What is fringing flux?**

The bulging of magnetic path at the air gap is called fringing. The fluxes in the bulged portion are called fringing effect.

**8. What are the factors that modify the reluctance of air gap.**

It is modified by slots, radial ventilating ducts and non uniform air gaps.

**9. Define gap contraction factor for slots.**

It is defined as the ratio of reluctance of air gap of slotted armature to reluctance of air gap of smooth armature.

**10. Define gap contraction factor for ducts.**

It is defined as the ratio of reluctance of air gap with ducts to reluctance of air gap without ducts.

**11. Define total gap contraction factor.**

It is defined as the ratio of reluctance of slotted armature with ducts to reluctance of smooth armature without ducts.

**12. Define field form factor.**

It is the ratio of average gap density over the pole pitch to maximum flux density in the air gap.

Shanmugasundaram,1979      *Theory and Design of Electric Machines* Frederick Creedy,1929      Electrical Machine Design Alexander Gray,2017-10-25 Excerpt from Electrical Machine Design The Design and Specification of Direct and Alternating Current Machinery A study of design is of the utmost importance to all students because only by such a study can a knowledge of the limitations of machines be acquired The machines discussed are those

which have become more or less standard namely direct current generators and motors alternating current generators synchronous motors polyphase induction motors and transformers other apparatus seldom offers an electrical problem that is not discussed under one or more of the above headings The principle followed throughout the work is to build up the design for the given rating by the use of a few fundamental formulae and design constants the meaning and limits of which are discussed thoroughly and the same procedure has been followed for the several pieces of apparatus About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
