Effect Directed Analysis Of Complex Environmental Contamination The Handbook Of Environmental Chemistry Volume 15:

Chemical Structure of Pelagic Redox Interfaces Evgeniy V. Yakushev, 2012-09-14 Over the last few decades many studies have focused on the oxygen depletion of coastal and oceanic waters An understanding of the processes involved is fundamental to assess the effects of global and climatic changes and to support an ecosystem approach to adaptive environmental management for coastal seas and ocean basins This timely book presents the state of the art of our knowledge of the nature and chemical structure of redox interfaces in a marine water column oxygen depletion and connected processes The structures of the redox layers including the distribution of certain parameters and microbiological features are described in detail The volume also covers studies devoted to the interannual variability of some oxygen depleted systems modeling and new developments in observation techniques In addition it identifies remaining gaps in our knowledge of the cycling of chemical elements in changing redox conditions The chapters are based on extensive observational data collected by the authors during sea and shore expeditions on archive data and on a broad range of scientific literature **Environment, Energy and Climate Change I** Elena Jiménez, Beatriz Cabañas, Gilles Lefebvre, 2015-01-16 This volume offers a comprehensive overview of advanced research in the field of environmental green chemistry for air soil and water pollutants and presents emerging technologies on the chemical treatment of polluted sites and wastes The 15 chapters prepared by internationally respected experts address the following topics 1 monitoring of indoor and outdoor air pollutants 2 atmospheric degradation processes and formation mechanisms of secondary pollutants 3 the environmental assessment and impacts of soils polluted by heavy metals and hydrocarbons 4 sustainable and emerging technologies for the chemical treatment of organic and animal wastes and wastewaters 5 photocatalytic CO₂ conversion methods for the mitigation of greenhouse effects and 6 non conventional methods in green chemistry synthesis Lastly the authors outline the future perspectives of each topic Given its multidisciplinary approach combining environmental analysis and engineering the book offers a valuable resource for all researchers and students interested in environmental chemistry and engineering The Sava River Radmila Milačič, Janez Ščančar, Momir Paunović, 2014-11-05 This volume provides a comprehensive overview of environmental aspects of the Sava River which is the greatest tributary to the Danube River and the major drainage river system of South Eastern Europe Hydroelectric power plants river traffic intensive agricultural activities heavy industry and floods have considerable influence on the environment and biota in the basin Summarizing the results that were gathered in the course of EU bilateral and national projects the book highlights the most important stressors and helps readers to better understand the impact of anthropogenic activities on the function of river basins Topics include transboundary water cooperation between the riparian countries climate change projection including its impact on flood hazards evaluation of anthropogenic pollution sources pollution of sediments metal bioavailability and ecotoxicological and microbiological

characterization of the river The biological part also addresses quality aspects related to wildlife in river aquatic ecosystems algae macrophytes zooplankton macroinvertebrates and fish and riparian ecosystems amphibians reptiles birds and mammals The general state of biodiversity and pressures caused by invasive aquatic species are also discussed Emerging and Priority Pollutants in Rivers Helena Guasch, Antoni Ginebreda, Anita Geislinger, 2012-02-21 The enduring changes in the aquatic environment and the increasing influx of contaminants call for novel conceptual and methodological approaches to relating chemical pollution and ecological alterations in ecosystems This volume highlights the latest advances concerning the sampling analyses occurrence bioavailability and effects of emerging and priority pollutants in European rivers the current status of the River Management Plans in Europe and the applicability of the newly developed techniques for water monitoring purposes The topics are discussed in the context of the EU Water Framework Directive evaluating their shortcomings and providing a basis for doing away with them Linking scientific research and river management practices this book is an invaluable source of information for environmental chemists aquatic scientists ecologists and water managers

Polyfluorinated Chemicals and Transformation Products Thomas P. Knepper, Frank T. Lange, 2011-09-20 Due to their unparalleled effectiveness and efficiency polyfluorinated chemicals PFC have become essential in numerous technical applications However many PFCs brought to market show limited biodegradability and their environmental persistence combined with toxic and bioaccumulative potential have become a matter of concern in some instances This volume highlights the synthesis of PFCs focusing on substances with improved application and environmental properties which are a challenge for synthetic chemists Further modern mass spectrometric techniques for the detection and identification of biotransformation products of PFCs are described The sorption and leaching behavior of PFC in soil is also addressed in order to predict their fate in the environment Several contributions discuss the monitoring of PFCs in European surface ground and drinking waters treatment options for PFC removal from drinking water occurrence in food and the human biomonitoring of PFCs Potable Water Tamim Younos, Caitlin A. Grady, 2014-09-15 This volume presents a unique and comprehensive glimpse of current and emerging issues of concern related to potable water The themes discussed include 1 historical perspective of the evolution of drinking water science and technology and drinking water standards and regulations 2 emerging contaminants water distribution problems and energy demand for water treatment and transportation and 3 using alternative water sources and methods of water treatment and distribution that could resolve current and emerging global potable problems This volume will serve as a valuable resource for researchers and environmental engineering students interested in global potable water sustainability and a guide to experts affiliated with international agencies working toward providing safe water to global communities **The Turkmen Lake Altyn Asyr and Water Resources in Turkmenistan** Igor S.
