*The Electroencephalogram* John S. Barlow, 1993 Although the electroencephalogram discovered more than a century ago has been used for years as a non invasive diagnostic tool it is still poorly understood In this book John Barlow describes an ingenious new hypothesis for a comprehensive model of the EEG that is able to emulate a large variety of known EEG patterns with few variables In contrast to previous hypotheses and models which have treated only selected EEG patterns rhythmic activity such as alpha activity and sleep spindles seen largely as filtered noise or irregular activity or certain types of epileptiform activity such as spikes this approach which is based on an oscillator with two separate input modulations of the extremes and the slopes of waves covers all types of EEG patterns and stems from specific features of the EEG itself rather than from arbitrary signals Barlow describes the hypothesis in detail then tests predictions for normal and abnormal EEGs with the aid of a hardware model and with specially developed methods of analysis The hypothesis is further evaluated in the light of extensive reviews of other EEG models and methods of analysis and of the underlying anatomy physiology and pathophysiology of cerebral electrical activity A technological section details the hardware model and the methodology for testing the hypothesis Appendixes present some new approaches to traditional methods of EEG analysis and artifact minimization areas in which Barlow has achieved international recognition John S Barlow M D is a Neurophysiologist in the Neurology Service at Massachusetts General Hospital Senior Research Associate in Neurology Neurophysiology at Harvard Medical School and a Research Affiliate in the Research Laboratory of Electronics at the Massachusetts Institute of Technology **The American Journal of EEG Technology** ,1975 Neural Information Processing Irwin King, 2006-09-26 The three volume set LNCS 4232 LNCS 4233 and LNCS 4234 constitutes the refereed proceedings of the 13th International Conference on Neural Information Processing ICONIP 2006 held in Hong Kong China in October 2006 The 386 revised full papers presented were carefully reviewed and selected from 1175 submissions **Current Practice of Clinical Electroencephalography** Timothy A.
