The Evolution of Travel Time Information Systems Margarita Martínez-Díaz, 2022-01-21 This book deals with the estimation of travel time in a very comprehensive and exhaustive way. Travel time information is and will continue to be one key indicator of the quality of service of a road network and a highly valued knowledge for drivers. Moreover, travel times are key inputs for comprehensive

traffic management systems All the above mentioned aspects are covered in this book The first chapters expound on the different types of travel time information that traffic management centers work with their estimation their utility and their dissemination They also remark those aspects in which this information should be improved especially considering future cooperative driving environments Next the book introduces and validates two new methodologies designed to improve current travel time information systems which additionally have a high degree of applicability since they use data from widely disseminated sources they could be immediately implemented by many administrations without the need for large investments Finally travel times are addressed in the context of dynamic traffic management systems The evolution of these systems in parallel with technological and communication advancements is thoroughly discussed Special attention is paid to data analytics and models including data driven approaches aimed at understanding and predicting travel patterns in urban scenarios Additionally the role of dynamic origin to destination matrices in these schemes is analyzed in detail
