Fundamentals of Gaseous Ionization and Plasma Electronics Essam Nasser,1971 **Nuclear Science Abstracts**,1971-10 The Mobility and Diffusion of Ions in Gases Earl Wadsworth McDaniel,Edward A. Mason,1973 *Clusters and Small Particles* Boris M. Smirnov,2012-12-06 Small particles in gaseous systems are called clusters aerosols dust particles Aitken particles etc depending on their size the media where they are observed and the field of science in which they are studied Below we call clusters systems of bound atoms or molecules containing from several atoms molecules up to thousands so that their structure can be essential for determining their properties If clusters are like bulk systems we call them small particles The principal peculiarity of clusters is with respect to magic numbers of cluster atoms that correspond to a heightened cluster stability Magic numbers correspond to complete structures of clusters as systems of bound atoms or molecules The values of magic numbers depend on the character of interaction of the clusters atoms Cluster parameters as a function of the number of cluster atoms n have extrema at the magic numbers of atoms For example a cluster with a magic number of atoms has a higher binding energy and ionization potential than clusters with neighboring numbers of atoms The difference between clusters and small particles is such that parameters of small particles are monotonic functions of the number of their atoms while for clusters these parameters have local extrema at magic numbers of atoms **Partially Ionized Gases** Morton Mitchner,Charles H.
