

Inverse Proportion Formula

The **inverse proportion formula** is an algebraic formula which represents the inverse proportion relationship between two variables.

If y is **inversely proportional to** x we can write:

$$y \propto \frac{1}{x}$$

\propto is the proportionality symbol, and means "is proportional to".

We can write this as an equation using the constant of proportionality, k :

$$y = \frac{k}{x}$$

or

$$xy = k$$

When two variables are inversely proportional, the product of the two variables is a constant, k .
