Disaster Risk Management and Country Partnership Strategies Asian Development Bank, 2017-11-01. From 2007 to 2016, disasters triggered by natural hazards caused around 322 000 fatalities, affected 1.7 billion people and resulted in direct physical damage totaling 487 billion in the developing member countries (DMCs) of the Asian Development Bank (ADB) alone. At the same time, many development actions provide opportunities to strengthen disaster resilience. Integration of disaster risk reduction into development is one of the key principles of ADB's Operational Plan for Integrated Disaster Risk Management. This guide supports the application of this principle by providing technical advice on the integration of disaster risk considerations in ADB country partnership strategy (CPS) preparation. The CPS provides opportunities to initiate a dialogue with DMCs on disaster risk management issues and to factor disaster risk management considerations into ADB assistance.

Natural Hazards and Disaster Risk Reduction Carina Fearnley, Emily Wilkinson, Catherine J. Tillyard, Stephen J. Edwards, 2016-04-08. Building upon presentations given during the conference on Disaster Risk Reduction for Natural Hazards: Putting Research into Practice held at University College London in November 2009, the articles collected in this book examine how natural hazards research is accessed and used by practitioners and decision makers and conversely how policy and practice inform research. As with the conference, this book successfully brings together views from humanitarian and development agencies, academia, business, government and funding bodies. It is rare to engage such a wide range of sectors in a discussion relating to the issues of disaster risk reduction from a natural hazards perspective and the book captures this interaction and the resultant exchange of ideas, thus providing an insight into how stakeholders respectively undertake or engage with natural hazards research. Collectively, the articles highlight the need for greater dialogue, understanding and collaboration between all these sectors if research is to be made relevant and generate significant impact on risk reduction policy and practice. There is an urgent requirement to better understand the respective needs, ways of working, project timescales and funding mechanisms for disaster risk reduction as well as the challenges posed by institutional and organizational structures and functions. These issues must be overcome to ensure that ultimately and most significantly, discussions turn into positive practical actions so that research on natural hazards is relevant and applicable. The book represents a step in that journey. This book was published as a special issue of *Environmental Hazards*.

Children and Young People's Participation in Disaster Risk Reduction Maggie Mort, Israel Rodriguez-Giralt, Ana Delicado, 2020-11-30 Available Open Access under CC BY NC licence Disasters are an increasingly common and complex combination of environmental social and cultural factors Yet existing response frameworks and emergency plans tend to homogenise affected populations as victims overlooking the distinctive experience capacities and skills of children and young people Drawing on participatory research with more than 550 children internationally this book argues for a radical transformation in children s roles and voices in disasters It shows practitioners policy makers and researchers how more child centred disaster management that recognises children s capacity to enhance disaster resilience actually benefits at risk communities as a whole

Sustainable Development and Disaster Risk Reduction Juha I. Uitto, Rajib Shaw, 2015-11-05 This book focuses on exploring the linkages between natural disasters and sustainable development at the global regional and national levels Disasters and development are closely related yet the disciplinary silos prevail and there is little communication and cooperation between the disaster management environment and development communities One catastrophic event such as an earthquake tsunami or cyclone can destroy infrastructure people s lives and livelihoods and set back development Similarly slow onset disasters often associated with global climate change pose threats to development livelihoods food security and long term sustainable development This book is uniquely aimed at bridging the gaps between the environmental development and disaster management communities It traces the evolution of concepts and practice and highlights the linkages between natural disasters and sustainable development in key sectors including food security health and water The book includes case studies from the field highlighting the complex issues that challenge sustainable development and disaster risk management in practice It draws policy conclusions for the global community based on state of the art knowledge from research and practice The primary target groups for the book are researchers including graduate students in the fields of environment and sustainable development geography disaster risk reduction and climate change studies The second target group comprises practitioners and policymakers working in national and international organizations the private sector and civil society
