## **Documenting Software Architectures Views And Beyond:**

**Documenting Software Architectures** Paul Clements, 2003 Architecture is crucial to the success of any large software system but even a superb architecture will fail if it isn't communicated well. Now there's a language and notation independent guide to capturing architecture so it can be used successfully by every analyst, software designer, and developer. The authors review the diverse goals and uses of software architecture documentation, providing documentation strategies for several common scenarios. They identify the basic unit of software architecture documentation, the viewtype, which specifies the type of information to be provided in an architectural view. For each viewtype, Modules, Component, and Connectors, and Allocation, they offer detailed guidance on documenting what really matters. Next, they demonstrate how to package architecture documentation in coherent, usable form, augmenting architectural views with documentation of interfaces and behavior, accounting for architectural variability and dynamic systems, and more.

**Documenting Software Architectures : Views and Beyond**, 2010      **Documenting Software Architectures** Paul Clements, 2003

*Documenting Software Architectures*, 2011      **Summary Record of the 1st Part (public) of the 2199th Meeting, Held at the Palais Wilson, Geneva, on Tuesday, 13 July 2004**, 2004      **Comparing the SEI's Views and Beyond Approach for Documenting Software Architectures with ANSI-IEEE 1471-2000** Paul Clements, 2005 Abstract  
Architecture documentation has emerged as an important architecture-related practice. In 2002, researchers at the Carnegie Mellon registered trademark Software Engineering Institute completed *Documenting Software Architectures Views and Beyond V B*, an approach that holds that documenting a software architecture is a matter of choosing a set of relevant views of the architecture, documenting each of those views, and then documenting information that applies to more than one view or to the set of views as a whole. Details of the approach include a method for choosing the most relevant views, standard templates for documenting views and the information beyond them, and definitions of the templates' content. At about the same time, the Institute of Electrical and Electronics Engineers (IEEE) was developing a recommended best practice for describing architectures for software-intensive systems, ANSI/IEEE Std 1471-2000. Like V B, that standard takes a multi-view approach to the task of architecture documentation and it establishes a conceptual framework for architectural description and defines the content of an architectural description. This technical note summarizes the two approaches and shows how a software architecture document prepared using the V B approach can be made compliant with Std 1471-2000.

**Documenting Software Architectures** Paul Clements, 1900 This new edition is brighter, shinier, more complete, more pragmatic, more focused than the previous one, and I wouldn't have thought it possible to improve on the original. As the field of software architecture has grown over these past decades, there is much more to be said, much more that we know, and much more that we can reflect upon of what's worked and what hasn't, and the authors here do all that, and more. The Foreword by Grady Booch, IBM Fellow, Software architecture: the conceptual glue that holds every phase of a project together.

for its many stakeholders is widely recognized as a critical element in modern software development. Practitioners have increasingly discovered that close attention to a software system's architecture pays valuable dividends. Without an architecture that is appropriate for the problem being solved, a project will stumble along or most likely fail. Even with a superb architecture, if that architecture is not well understood or well communicated, the project is unlikely to succeed.

**Documenting Software Architectures**, 2003. *Documenting Software Architectures* Paul Clements, Felix Bachmann, Len Bass, David Garlan, James Ivers, Reed Little, Paulo Merson, Robert Nord, Judith Stafford, 2010-10-05. Software architecture is the conceptual glue that holds every phase of a project together for its many stakeholders. It is widely recognized as a critical element in modern software development. Practitioners have increasingly discovered that close attention to a software system's architecture pays valuable dividends. Without an architecture that is appropriate for the problem being solved, a project will stumble along or most likely fail. Even with a superb architecture, if that architecture is not well understood or well communicated, the project is unlikely to succeed. *Documenting Software Architectures* Second Edition provides the most complete and current guidance independent of language or notation on how to capture an architecture in a commonly understandable form. Drawing on their extensive experience, the authors first help you decide what information to document and then, with guidelines and examples in various notations including UML, show you how to express an architecture so that others can successfully build, use, and maintain a system from it. The book features rules for sound documentation, the goals and strategies of documentation, architectural views and styles, documentation for software interfaces and software behavior, and templates for capturing and organizing information to generate a coherent package. New and improved in this second edition: Coverage of architectural styles such as service-oriented architectures, multi-tier architectures, and data models. Guidance for documentation in an Agile development environment. Deeper treatment of documentation of rationale reflecting best industrial practices. Improved templates reflecting years of use and feedback and more documentation layout options. A new comprehensive example available online featuring documentation of a Web-based service-oriented system. Reference guides for three important architecture documentation languages: UML, AADL, and SysML.

**Creating and Using Software Architecture Documentation Using Web-based Tool Support** Judith Alyce Stafford, 2004. Abstract: Documenting software architecture (DSA) is a crucial facet in the development of a software system, yet often it is carried out in a haphazard fashion, if at all. Lack of attention to the documentation results from insufficient guidance about what should be documented and when and how to capture the information so that system stakeholders find it useful. The book *Documenting Software Architectures: Views and Beyond* provides such guidance in the DSA approach, and this report describes the conceptual design for a documentation system based on that approach. A system is envisioned that enables the architect to capture architectural decisions and related artifacts as a living repository that can communicate information to stakeholders who might be both geographically and temporally distributed. The system must communicate in a way that allows each stakeholder quick and easy access to information relevant to the person's role in the software development process. This report describes a design prototype that demonstrates a Web-based approach to creating, communicating, and using software architecture throughout the life of the system.

*Documenting Software Architectures in an Agile World* Paul Clements, 2003. Abstract: This report compares the

Software Engineering Institute's Views and Beyond approach for documenting software architectures with the documentation philosophy embodied in agile software development methods. This report proposes an approach for capturing architecture information in a way that is consistent with agile methods.

**Documenting Software Architectures** Felix Bachmann, 2001 Abstract This report represents a milestone of a work in progress. That work is a comprehensive handbook on how to produce high quality documentation for software architectures. The handbook tentatively entitled Documenting Software Architectures will be published in early 2002 by Addison Wesley Longman as part of the SEI Series on Software Engineering. Since this report is a snapshot of current work, the material described here may change before the handbook is published. The theme of the report is that documenting an architecture entails documenting the set of relevant views of that architecture and then completing the picture by documenting information that transcends any single view. The audience for Documenting Software Architectures is the community of practicing architects, apprentice architects, and developers who receive architectural documentation.

**A Structured Approach for Reviewing Architecture Documentation** Robert Nord, 2009 Abstract This technical note proposes a structured approach for reviewing architecture documentation. Given the critical importance of architecture to software project success, it follows that the architecture cannot be effective unless it is effectively captured in documentation that allows the architecture's stakeholders to understand and use the architecture in the way it was intended. The approach does not assume a particular architecture methodology or a particular architecture documentation practice, although it was conceived in the context of the International Organization for Standardization (ISO) Recommended Practice for Architecture Description of Software Intensive Systems and the SEI Views and Beyond approach to documenting software architectures. Like both of them, our approach is centered on the stakeholders of the artifact, engaging them in a focused, guided way to ensure that the documentation carries sufficient quality to enable them to do their jobs and to help them point out gaps and weaknesses. Our approach is not intended as a complete framework for architecture evaluation; rather, it is meant to be used within such a framework when one is available.

**Documenting Software Architectures** David Garlan, João Pedro Sousa, 2000 Abstract An important issue for software system development is the documentation of architecture designs. In this report, we describe techniques for the architectural documentation of software-based systems in the context of development processes that use UML for software design. The architectural documentation is organized in four kinds of views: problem domain view, code view, run-time view, and deployment view. We examine JavaPhone™ as a case study to illustrate the approach: what kinds of information are provided in each kind of view, what forms of notation should be used, what are their limitations, and what uses can be made of this documentation.

**Software Architecture** , 2005 Software Architecture Documentation in Practice Felix Bachmann, 2000 Abstract This report represents the first milestone of a work in progress. That work is a comprehensive handbook on how to produce high quality documentation for software architectures. The handbook tentatively entitled Software Architecture Documentation in Practice

will be published in mid to late 2000 by Addison Wesley Longman as a book in the SEI series on software engineering. Aimed squarely at the practitioner, the handbook is intended to fill a gap in the literature. There is a complete lack of language independent guidance about how to actually capture an architecture in written form so that it can fulfill its purpose as a communication vehicle providing a unified design vision to all of the varied stakeholders of a development project. The theme of the work is that documenting an architecture entails documenting the set of relevant views of that architecture and then completing the picture with documentation of information that transcends any single view. The report lays out our approach and organization for the complete book and provides full guidance for one of the most commonly used architectural views, the layer diagram. The audience for this book is the community of practicing architects, apprentice architects, and developers who are on the receiving end of architectural documentation.

*Proceedings / 10th Working Conference on Reverse Engineering, WCRE 2003 : Victoria, B.C., Canada, 13 - 16 November 2003* Working Conference on Reverse Engineering, 2003
