1. The first step in the process of the development of the organization is the identification of the organization's mission and vision. This is a critical step as it sets the direction for the organization and provides a clear focus for all activities. The mission statement should be concise and clear, and the vision statement should be aspirational and motivating.

2. The second step is to conduct a thorough analysis of the organization's internal and external environment. This involves identifying the organization's strengths and weaknesses, as well as the opportunities and threats it faces. This analysis should be based on a combination of quantitative and qualitative data, and should involve input from all levels of the organization.

3. The third step is to develop a strategic plan that outlines the organization's goals and objectives, and the actions that will be taken to achieve them. This plan should be based on the findings of the environmental analysis, and should be realistic and achievable. It should also be flexible, as the organization's environment is likely to change over time.

4. The fourth step is to implement the strategic plan. This involves putting the plan into action, and monitoring progress towards the goals and objectives. This step requires a strong commitment from all members of the organization, and a willingness to adapt and change as needed.

5. The fifth and final step is to evaluate the organization's performance. This involves measuring the organization's progress towards its goals and objectives, and identifying areas for improvement. This evaluation should be based on a combination of quantitative and qualitative data, and should involve input from all levels of the organization.
