Capillary Flows with Forming Interfaces Yulii D.

Shikhmurzaev,2007-09-14 Capillary Flows with Forming Interfaces explores numerous theoretical problems that arise in the mathematical description of capillary flows It focuses on developing a unified approach to a variety of seemingly very different capillary flows of practical importance where classical fluid mechanics leads to nonphysical results The book begins

Trends in Continuum Mechanics of Porous Media Reint de Boer,2005-02-15 Over the last decade and particularly in recent years the macroscopic porous media theory has made decisive progress concerning the fundamentals of the theory and the development of mathematical models in various fields of engineering and biomechanics This progress has attracted some attention and therefore conferences devoted almost exclusively to the macroscopic porous media theory have been organized in order to collect all findings to present new results and to discuss new trends Many important contributions have also been published in national and international journals which have brought the porous media theory in some parts to a close Therefore the time seems to be ripe to review the state of the art and to show new trends in the continuum mechanical treatment of saturated and unsaturated capillary and non capillary porous solids This book addresses postgraduate students and scientists working in engineering physics and mathematics It provides an outline of modern theory of porous media and shows some trends in theory and in applications
