Fundamentals of Public Utilities Management Frank R. Spellman, 2020-09-21. *Fundamentals of Public Utilities Management* provides practical information for constructing a roadmap for successful compliance with new and ever changing regulatory frameworks, upgrading and maintenance, and general management of utilities operations. It describes current challenges faced by utility managers and offers best practices. In an effort to maximize the usefulness of the material for a broad audience, the text is written in a straightforward, user friendly, conversational style for students and practicing professionals alike. Features: Presents numerous illustrative examples and case studies throughout. Examines environmental compliance and how to best work with continually changing regulations. Frames the discussions in a context of energy conservation and ongoing sustainability efforts. *Fundamentals of Public Utilities Management* is designed to provide insight and valuable information to public utility sector managers and prospective managers in water operations, drinking water, wastewater, storm water, and to serve the needs of students, teachers, consulting engineers, and technical personnel in city, state, and federal public sectors.

Sustainable Water Management and Irrigation Systems João Carlos Correia Leitão, Wael Khairy, Dina Pereira, Jelena Zascerinska, Pedro Dinis Gaspar, 2025-07-26. Globally, different regions are facing severe water shortages. Population growth, changing consumer behavior, and climate change seriously affect freshwater availability. Much of the water used for conventional irrigation infiltrates or evaporates and is therefore unusable. Thus, innovative irrigation systems must be developed to exploit largely unused non-conventional water resources. Additionally, low cost solutions should be used with natural and regionally available materials. Low Technology, Low Energy, Low Budget, Easy to Use. The present edited volume aims at: i) making available holistic approaches to sustainable water and natural resources management systems; ii) presenting evaluation results of new micro irrigation technologies tested in different international contexts; iii) contributing to effectively combating the negative impacts of climate change on water availability, agriculture, and food security; and iv) providing implications for policymakers, entrepreneurs, and researchers interested in water management issues and sustainable development goals (SDGs). **EPA's Role in Promoting Water Use Efficiency** United States.

The Encyclopedia of the UN Sustainable Development Goals comprehensively addresses the SDGs in an integrated way. It encompasses 17 volumes each devoted to one of the 17 SDGs. This volume is dedicated to SDG 6: Ensure availability and sustainable management of water and sanitation for all. Water and sanitation are fundamental to human well-being. Integrated water resources management is essential to ensure availability and sustainable management of water and sanitation for all and to the realization of Sustainable Development. Concretely, the defined targets are: Achieve universal and equitable access to safe and affordable drinking water for all; Achieve access to adequate and equitable sanitation and hygiene for all and end open defecation, paying special attention to the needs of women and girls and those in vulnerable situations; Improve water quality by reducing pollution, eliminating dumping and minimizing release of hazardous chemicals and materials, halving the proportion of untreated wastewater and substantially increasing recycling and safe reuse globally; Substantially increase water use efficiency across all sectors and ensure sustainable withdrawals and supply of freshwater to address water scarcity and substantially reduce the number of people suffering from water scarcity; Implement integrated water resources management at all levels, including through transboundary cooperation as appropriate; Protect and restore water-related ecosystems, including mountains, forests, wetlands, rivers, aquifers, and lakes; Expand international cooperation and capacity building support to developing countries in water and sanitation-related activities and programmes, including water harvesting, desalination, water efficiency, wastewater treatment, recycling, and reuse technologies; Support and strengthen the participation of local communities in improving water and sanitation management.
