This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series; they are collections of at least ten articles all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings, and historical advances in a hot research area. Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: frontiersin.org about contact.

Neanderthal Complex Behaviour Through the Lens of Faunal Resources Mariana Nabais, Ruth Blasco, 2025-12-05. Back in the 19th century when evolution was becoming established, it was easy to assume that fossil meant primitive. Such a notion continued, and it implied that human complex behaviors were considered hallmarks of modernity and therefore exclusive to Anatomically Modern Humans (AMH). However, in recent decades, archaeology has demonstrated that both cognitively and behaviorally, Neanderthals were no different from their contemporary African populations from which our ancestry mostly derives. Additionally, there have been an increasing number of examples where a single skeleton displays a combination of Neanderthal and AMH morphological characteristics. Recent genetic studies have also confirmed these ideas of interbreeding, showing that most current western world populations carry Neanderthal genes. This genetic work has enhanced the growing body of evidence displaying Neanderthal complexity, like their use of personal ornamentation, their probable artistic representations in some Spanish caves, or their adaptability to different resources and environments. Zooarchaeological investigation is seen as key in detecting Neanderthal complex behaviors and can advance our understanding in one of the most debated issues in Paleolithic Archaeology: The traditional idea of Neanderthals avoiding the coast and their marine resources, or their disregard for small size prey like birds, rabbits, or tortoises, has been put into question. Multiple archaeological sites have shown evidence of intentionally broad diets in Neanderthals, marked by the inclusion of a wide range of animals from very large to small game and the consumption of aquatic resources. Zooarchaeology has been pivotal in providing evidence to disprove long-standing notions of Neanderthal inability to not only adapt to changing environments but also their inability to procure, process, store, and preserve faunal resources and even use these faunal resources as raw materials for tool production and ornamentation. The goal of this Research Topic is two-fold: 1) to present new evidence that challenges the traditionally accepted models in which Neanderthals are seen as limited in their faunal resource use; 2) to design new models in which ecological adaptability and faunal resource use trends can demonstrate Neanderthal's malleable and complex behaviors. The scope of this collection will

comprehensively compile the current developments and recent advancements in the field of zooarchaeology from Neanderthal contexts We welcome original research systematic review methods review hypothesis theory article types as well as mini reviews perspectives case reports and brief research reports Areas to be covered in this Research Topic may include but are not limited to Large and small prey use by Neanderthals e g food raw materials ornamentation Neanderthal provisioning strategies of faunal resources Neanderthal processing activities of faunal resources Neanderthal preservation and storing of faunal resources Neo taphonomic experimentations with faunal specimens *A 150 years' celebration of darwin's book on human evolution and sexual selection: Its legacy and future prospects* Marco Antonio Correa
