4 QUADRANT OPERATION OF MOTOR

- Compressor, pump and fan type load requires operation in the I quadrant only. As their operation is unidirectional, they are called one quadrant drive systems.
- Transportation drives require operation in both directions.
- If regeneration is necessary, application in all four quadrants may be required. If not, then the operation is restricted to quadrants I and III, and thus dynamic braking or mechanical braking may be required.
- In hoist drives, a four-quadrant operation is needed.
