Coello Coello, Oliver Schütze, 2012-09-14 The aim of this book is to provide a strong theoretical support for understanding and analyzing the behavior of evolutionary algorithms as well as for creating a bridge between probability set oriented numerics and evolutionary computation The volume encloses a collection of contributions that were presented at the EVOLVE 2011 international workshop held in Luxembourg May 25 27 2011 coming from invited speakers and also from selected regular submissions The aim of EVOLVE is to unify the perspectives offered by probability set oriented numerics and evolutionary computation EVOLVE focuses on challenging aspects that arise at the passage from theory to new paradigms and practice elaborating on the foundations of evolutionary algorithms and theory inspired methods merged with cutting edge techniques that ensure performance guarantee factors EVOLVE is also intended to foster a growing interest for robust and efficient methods with a sound theoretical background The chapters enclose challenging theoretical findings concrete optimization problems as well as new perspectives By gathering contributions from researchers with different backgrounds the book is expected to set the basis for a unified view and vocabulary where theoretical advancements may echo in different domains **Modeling, Analysis, and Applications in Metaheuristic Computing: Advancements and Trends** Yin, Peng-Yeng, 2012-03-31 This book is a collection of the latest developments models and applications within the transdisciplinary fields related to metaheuristic computing providing readers with insight into a wide range of topics such as genetic algorithms differential evolution and ant colony optimization Provided by publisher *Proceedings of the ... Congress on Evolutionary Computation*, 2004 Evolutionary Multi-objective Optimization in Uncertain Environments Chi-Keong Goh, Kay Chen Tan, 2009-03-09 Evolutionary algorithms are sophisticated search methods that have been found to be very efficient and effective in solving complex real world multi objective problems where conventional optimization tools fail to work well Despite the tremendous amount of work done in the development of these algorithms in the past decade many researchers assume that the optimization problems are deterministic and uncertainties are rarely examined The primary motivation of this book is to provide a comprehensive introduction on the design and application of evolutionary algorithms for multi objective optimization in the presence of uncertainties In this book we hope to expose the readers to a range of optimization issues and concepts and to encourage a greater degree of appreciation of evolutionary computation techniques and the exploration of new ideas that can better handle uncertainties Evolutionary Multi Objective Optimization in Uncertain Environments Issues and Algorithms is intended for a wide readership and will be a valuable reference for engineers researchers senior undergraduates and graduate students who are interested in the areas of evolutionary multi objective optimization and uncertainties *Model-Based Control of Logistics Processes in Volatile Environments* Jörn Schönberger, 2011-05-04 This monograph presents results originating from a research project investigating autonomous adaptation of vehicle schedules and systematically develops

and evaluates innovative ideas for the management of transportation processes in volatile scenarios Showing the progress made in the development of the methodological toolbox for decision support in dynamic process management is the major motivation behind this book The result is a new integrated approach to dynamic decision making Existing process planning approaches for volatile environments and their application boundaries are investigated in Part I Part II introduces the concept of feedback controlled adaptive decision models and proposes the required extensions of the online decision making framework and of multi agent systems A comprehensive evaluation of the proposed decision model adaptation framework based on computational simulation experiments is reported in Part III and demonstrates the predominance of the new approach Distinguishing features of this book are It provides the first contribution to the operational management of processes in supply networks that explicitly addresses the two challenges of dynamics and distributed decision making simultaneously It systematically approaches the limits of model based process planning but also proposes methods to extend the application boundaries Software prototypes are developed and a comprehensive evaluation within numerical simulation experiments is executed The observed results are discussed with an explicit focus on specific performance indicators flexibility stability and robustness The strict interdisciplinary approach merging the requirements and needs of management sciences operations research and computer sciences is pursued throughout the book
