Bernhardt, 2012-12-31 Biogeochemistry winner of a 2014 Textbook Excellence Award Texty from the Text and Academic Authors Association considers how the basic chemical conditions of the Earth from atmosphere to soil to seawater have been and are being affected by the existence of life Human activities in particular from the rapid consumption of resources to the destruction of the rainforests and the expansion of smog covered cities are leading to rapid changes in the basic chemistry of the Earth This expansive text pulls together the numerous fields of study encompassed by biogeochemistry to analyze the increasing demands of the growing human population on limited resources and the resulting changes in the planet's chemical makeup The book helps students extrapolate small scale examples to the global level and also discusses the instrumentation being used by NASA and its role in studies of global change With extensive cross referencing of chapters figures and tables and an interdisciplinary coverage of the topic at hand this updated edition provides an excellent framework for courses examining global change and environmental chemistry and is also a useful self study guide Winner of a 2014 Texty Award from the Text and Academic Authors Association Calculates and compares the effects of industrial emissions land clearing agriculture and rising population on Earth's chemistry Synthesizes the global cycles of carbon nitrogen phosphorous and sulfur and suggests the best current budgets for atmospheric gases such as ammonia nitrous oxide dimethyl sulfide and carbonyl sulfide Includes an extensive review and up to date synthesis of the current literature on the Earth's biogeochemistry *Biogeochemistry* W.H. Likens, 2013-08-13 The goal of this Third Edition is to update long term data presented in earlier editions and to generate

new syntheses and conclusions about the biogeochemistry of the Hubbard Brook Valley based on these longer term data. There have been many changes, revelations and exciting new insights generated from the longer data records. For example, the impact of acid rain peaked during the period of the HBES and is now declining. The longer term data also posed challenges in that very marked changes in fluxes occurred in some components such as hydrogen ion and sulfate deposition, calcium and nitrate export in stream water and biomass accumulation during the almost 50 years of record. Thus presenting mean or average conditions for many components for such a long period when change was so prominent do not make sense. In some cases pentads or decades of time are compared to show these changes in a more smoothed and rational way for this long period. In some cases a single period often during periods of rapid change such as acidification is used to illustrate the main point. And for some elements a unique mass balance approach allowing the calculation of the Net Ecosystem Flux (NEF) is shown on an annual basis throughout the study.

Earth System Science M. C. JACOBSON, R. J. CHARLSON, H. RODHE, G. H. ORIAN, 2000 *Biogeochemical Cycles* Katerina Dontsova, Zsuzsanna Balogh-Brunstad, Gaël Le Roux, 2020-04-14

Elements move through Earth's critical zone along interconnected pathways that are strongly influenced by fluctuations in water and energy. The biogeochemical cycling of elements is inextricably linked to changes in climate and ecological disturbances, both natural and man-made. *Biogeochemical Cycles: Ecological Drivers and Environmental Impact* examines the influences and effects of biogeochemical elemental cycles in different ecosystems in the critical zone. Volume highlights include: Impact of global change on the biogeochemical functioning of diverse ecosystems; Biological drivers of soil rock and mineral weathering; Natural elemental sources for improving sustainability of ecosystems; Links between natural ecosystems and managed agricultural systems; Non-carbon elemental cycles affected by climate change; Subsystems particularly vulnerable to global change. The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity. Its publications disseminate scientific knowledge and provide resources for researchers, students and professionals. Global Environment Elizabeth Kay Berner, Robert A. Berner, 2012-04-22

The new revised edition of a classic Earth science text. This newly revised edition of *Global Environment* discusses the major elements of the geochemical cycles and global fluxes found in the atmosphere, land, lakes, rivers, biota and oceans, as well as the human effects on these fluxes. Retaining the strengths of the original edition while incorporating the latest discoveries, this textbook takes an integrated multidisciplinary and global approach to geochemistry and environmental problems and introduces fundamental concepts of meteorology, surficial geology, weathering, erosion and sedimentation, biogeochemistry, limnology and oceanography. New concepts and information in this updated edition include changes of atmospheric carbon dioxide over geologic time, major advances in the study of chemical weathering of rocks, ocean acidification and important environmental problems such as the amelioration of the acid rain problem due to reduction in sulfur deposition problems.

with nitrification of soils and lakes and eutrophication of rivers and estuaries An expanded chapter explores atmospheric chemistry and changing climate with the most up to date statistics on CO₂ the carbon cycle other greenhouse gases and the ozone hole Only requiring a fundamental understanding in elementary chemistry yet taking into account extensive and current data this text is ideal for students in environmental geochemistry environmental geology global change biogeochemistry water pollution geochemical cycles chemical oceanography and geohydrology and serves as a valuable reference for researchers working on global geochemical and environmental issues Revised edition takes a close look at global fluxes involving the atmosphere land lakes rivers biota and oceans and the human effects on these fluxes Detailed discussion of basic concepts including meteorology surficial geology weathering erosion and sedimentation biogeochemistry limnology and oceanography An expanded up to date chapter on atmospheric chemistry and changing climate including CO₂ other greenhouse gases and ozone Presentation of major advances in the study of chemical weathering Discussion of current environmental topics Global coverage of environmental problems involving water

Global Biogeochemical Cycles in the Climate System Ernst-Detlef Schulze, Martin Heimann, Sandy Harrison, Elisabeth Holland, Jonathan Lloyd, Ian Colin Prentice, David S. Schimel, 2001-08-10 The interactions of biogeochemical cycles influence and maintain our climate system Land use and fossil fuel emissions are currently impacting the biogeochemical cycles of carbon nitrogen and sulfur on land in the atmosphere and in the oceans This edited volume brings together 27 scholarly contributions on the state of our knowledge of earth system interactions among the oceans land and atmosphere A unique feature of this treatment is the focus on the paleoclimatic and paleobiotic context for investigating these complex interrelationships Eight page colour insert to highlight the latest research A unique feature of this treatment is the focus on the paleoclimatic context for investigating these complex interrelationships

Interactions of C, N, P, and S Biogeochemical Cycles and Global Change R. Wollast, Fred T. Mackenzie, Lei Chou, 1993 This book is a natural extension of the SCOPE Scientific Committee of Problems on the Environment volumes on the carbon C nitrogen N phosphorus P and sulfur S biogeochemical cycles and their interactions

Likens 1981 Bolin and Cook 1983 Substantial progress in the knowledge of these cycles has been made since publication of those volumes In particular the nature and extent of biological and inorganic interactions between these cycles have been identified positive and negative feedbacks recognized and the relationship between the cycles and global environmental change preliminarily elucidated In March 1991 a NATO Advanced Research Workshop was held for one week in Melreux Belgium to reexamine the biogeochemical cycles of C N P and S on a variety of time and space scales from a holistic point of view This book is the result of that workshop The biogeochemical cycles of C N P and S are intimately tied to each other through biological productivity and subsequently to problems of global environmental change These problems may be the most challenging facing humanity in the 21 st century In the broadest sense global change encompasses both changes to the status of the large globally connected atmospheric oceanic and terrestrial environments e g tropospheric temperature increase and change occurring as the result of nearly simultaneous local changes in many regions of the world e g eutrophication
