Galapagos Michael Hume Jackson, 1993 This book details the natural history of the plants and animals found in the Galapagos Islands A list of the dominant plants according to vegetation zone is included Of particular note is the discussion of the problems of colonisation by founding populations biological evolution and ecology and of the evolutionary processes bringing about species diversity *Mammalia*, 1936 *A Creationist Review and Preliminary Analysis of the History, Geology, Climate, and Biology of the Galapagos Islands* Todd Charles Wood, 2005-05-09 NO COPY TO BE USED ON THE BACK COVER AS PER EDITOR **The Canadian Forum**, 1997 Includes critical reviews How Life Increases Biodiversity David Seaborg, 2021-09-09 This book argues that organisms and their interactions create and maximize biodiversity The evidence for this autocatalytic hypothesis has been collated and integrated into this provocative argument Natural selection favors the increase of biodiversity Organisms can be causative agents contributing to major macroevolutionary transitions Species tend to have a net positive effect on biodiversity All species are ecosystem engineers Mutualism and commensalism are common and fundamental and these coevolved interspecific interactions frequently generate enormous increases in biodiversity Competition generally does not decrease biodiversity and often leads to evolutionary innovation Plants are ecosystem engineers that have made Earth more favorable to life and increased diversity in many ways Herbivores and predators increase the diversity of the species they consume and are necessary for ecosystem stability Decomposers are essential to ecosystem health All these examples illustrate the focus of this book that organisms and their interactions stimulate biodiversity and ecosystems maximize it Key Features Describes a hypothesis that life itself generates higher biodiversity Suggests a highly modified version of the established paradigm in population biology and evolution Asserts that all species are ecosystem engineers with a net positive effect on biodiversity and their ecosystems Suggests that mutualism and commensalism are the rule Presents a novel view likely to elicit deeper discussions of biodiversity Related Titles Dewdney A K Stochastic Communities A Mathematical Theory of Biodiversity ISBN 978 1 138 19702 2 Curry G B and C J Humphries eds Biodiversity Databases Techniques Politics and Applications ISBN 978 0 367 38916 1 Pullaiah T ed Global Biodiversity 4 Volume Set ISBN 978 1 77188 751 9 **The Annals & Magazine of Natural History**, 1916 **The annals and magazine of natural history, zoology, botany and geology**, 1896 **South American Explorer**, 2003 *The Annals and Magazine of Natural History*, 1874 Natural History, 1923 Quill & Quire, 1996 **Dancing at the Dead Sea** Alanna Mitchell, 2004 Dancing at the Dead Sea is a powerful narrative on the critically important topic of the world's environmental hotspots This is not a pessimistic tirade but instead a factual commentary that will convince many written by a gifted writer with an independent mind I recommend this book without reservation Richard Leakey Alanna Mitchell winner of the Global Reuters IUCN media award for excellence in environmental reporting embarks on an incredible worldwide cultural and environmental odyssey zeroing in on environmental hotspots and

examines how we can live even flourish without destroying the planet One hundred and fifty years after the publication of The Origin of Species Mitchell retraces the development of evolutionary theory grappling with Richard Leakey's contention that the extinction of the human species is well under way How and why are we human beings shortening our time on Earth Travelling to the last living Eden Madagascar Mitchell is witness to the destruction of all but 10 percent of the original forest not due to industrial activity but woodcutting by a primitive society still dependent on fire as its main energy resource She then moves on to the badlands of Alberta where she draws on the theory of world famous paleontologist Philip Currie and the extinction of dinosaurs to gain insight on humanity's own impending suicide Travel to the Azraq Oasis in Jordan the meeting place of Africa Asia and Europe the mythical Galapagos Islands seemingly unspoiled but not immune to degradation the far north and the Arctic desert of Banks Island one of the first places on Earth where climate change with global impact is visible Like the work of Wade Davis or books such as Krakatoa by Simon Winchester and Four Wings and a Prayer by Sue Halpern Dancing at the Dead Sea intertwines scientific theory with travel adventure and history creating a dramatic fresh narrative voice examining not the origin but the ultimate fate of the human species April 2004 **Galápagos** Randy
