Hipel, 2012-12-06 Objectives The current global environmental crisis has reinforced the need for developing flexible mathematical models to

obtain a better understanding of environmental problems so that effective remedial action can be taken. Because natural phenomena occurring in hydrology and environmental engineering usually behave in random and probabilistic fashions, stochastic and statistical models have major roles to play in the protection and restoration of our natural environment. Consequently, the main objective of this edited volume is to present some of the most up-to-date and promising approaches to stochastic and statistical modelling, especially with respect to groundwater and surface water applications.

**Contents** As shown in the Table of Contents, the book is subdivided into the following main parts: GENERAL ISSUES, PART I, PART II, GROUNDWATER, PART III, SURFACE WATER, PART IV, STOCHASTIC OPTIMIZATION, PART V, MOMENT ANALYSIS, PART VI, OTHER TOPICS. Part I raises some thought-provoking issues about probabilistic modelling of hydrological and environmental systems. The first two papers in Part I are, in fact, keynote papers delivered at an international environmental metrics conference held at the University of Waterloo in June 1993 in honour of Professor T. E. Unny. In his keynote paper, Dr S. J. Burges of the University of Washington places into perspective the historical and future roles of stochastic modelling in hydrology and environmental engineering. Additionally, Dr Burges stresses the need for developing a sound scientific basis for the field of hydrology.
