Entry Barriers Into The European Civil Aviation Markets Theory And New Evidence:

Entry barriers into the European Civil Aviation markets Mirko Schnell, 1999-02-15 Inhaltsangabe Abstract The contestability hypothesis has extensively been tested for the liberalised US airline markets Entry barriers render US airline markets non contestable However these studies do not allow an empirically based conclusion whether entry barriers are differently effective in preventing entry Moreover since previous studies exhibit no intra firm perspective they cannot ascertain whether a particular entry impediment prevents entry equally effective irrespective of potential entrant s characteristics Comparable studies about the recently liberalised European airline markets are not available This study fills these gaps by investigating European airline managers perception of entry barriers It turn out that some barriers are perceived to be significantly more effective than others The perception of the effectiveness of a certain entry barrier however varies considerably among airline managers Airlines and respondents characteristics contribute to explain this variance

Competition versus Predation in Aviation Markets Peter Forsyth, 2018-01-18 Prior to liberalization there was little scope for predatory behaviour in the aviation market However following deregulation new entrants sought to compete with entrenched incumbents Low cost carriers LCCs gained significant market share which in turn provoked many different kinds of defensive response Having put pressure on established carriers low cost airlines are themselves feeling the pressure of competition from new operators While it is normal and natural for airlines to react to competition modifying their services the ways in which they offer them and their prices when does aggressive commercial behaviour go too far and become predation This book considers what exactly is meant by predation in the aviation environment and explores the strategies LCCs adopt in order to gain market share as well as the strategies of the established

airlines in response to competition from new entrants to the market It also addresses the key question of what competition policy should do to ensure intensive competition Competition versus Predation in Aviation Markets brings together contributions from around the world from airlines government agencies leading academics and consultants providing a wealth of perspectives on a business practice crucial to airline survival *Review of Industrial Organization* ,2002

Straight and Level Stephen Holloway,2016-12-14 This third edition of Straight and Level thoroughly updates the previous edition with extensive comments on recent industry developments and emerging business models The discussion is illustrated by current examples drawn from all sectors of the industry and every region of the world The fundamental structure of earlier editions now widely used as a framework for air transport management courses nonetheless remains unchanged Part 1 of the book provides a strategic context within which to consider the industry s economics Part 2 is built around a simple yet powerful model that relates operating revenue to operating cost it examines the most important elements in demand and traffic price and yield output and unit cost Part 3 probes more deeply into three critical aspects of capacity management network management fleet management and revenue management Part 4 concludes the book by exploring relationships between unit revenue unit cost yield and load factor Straight and Level has been written primarily for masters level students on aviation management courses The book should also be useful to final year undergraduates wanting to prepare for more advanced study Amongst practitioners it will appeal to established managers moving from functional posts into general management More broadly anyone with knowledge of the airline industry who wants to gain a deeper understanding of its economics at a practical level and an insight into the reasons for its financial volatility should find the book of interest

Airport Competition Regulation in Europe Stamatis Varsamos,2016-10-15 Over the past thirty years airports within the EU including nearly a hundred newly built or rebuilt during that time have undergone a major economic transformation From mere infrastructure providers airports have become diversified and complex commercial enterprises in competition with each other This is the first and only book thus far to deal with the legal issues surrounding this important development focusing on the impact of EU Directive 12 2009 on airport charges Examining the use of airport infrastructure the growing competition among airports and the relations between airlines and airports the author a leading aviation law practitioner covers such issues and topics as the following types of charges landing passenger aircraft parking pricing factors determining airport charges vertical contractual relations between airports and airlines airport market power and dominance issues of consultation and transparency ability of airlines and passengers to switch to alternative airports application of state aid rules security charges environmental charges and schemes and price discrimination and differentiation The presentation encompasses a critical analysis of the findings of case law both international and European on airport charges in the context of the new trend of airports and airlines concluding vertical agreements As an examination of the economic regulation of EU airports due to the liberalization process structural changes in the ownership status of many EU airports and the emergence

of new airline business models such as low cost carriers this book the only one of its kind will quickly become indispensable to practitioners policymakers and academics in aviation law *Economic Regulation of Airports* Di Mei,2025-11-14 This book explores airport charges regulation presenting a fresh perspective on a crucial yet marginalized subject Providing a clear pathway for regulation of the economic aspects of airports specifically charges the book employs an adaptable approach grounded in private law principles Challenging the conventional command and control model of traditional regulation that once governed airports the book contends that an agile private law approach offers a more responsive and efficient means of overseeing airport charges in the face of increasing complexity within the industry Within this overarching approach two key instruments emerge First the book demonstrates the effectiveness of contracts as a powerful tool for integrating regulations on airport charges Second the cultivation of robust corporate governance is posited as a mechanism that naturally instigates effective regulation Through illuminating the efficacy of a private law approach the book demonstrates how this innovative approach not only works as a regulatory mechanism for airport charges but can also be applied within the broader spectrum of infrastructure regulation The book will be of interest to researchers in the field of air law contract law corporate law competition law and aviation business and management employing case studies to illustrate its points
