Institutions and Sustainability Volker Beckmann, Martina Padmanabhan, 2009-02-07 From the first vague idea to use Konrad Hagedorn's 60th birthday as an inspiration for taking stock of his vibrant academic contributions this joint book project has been a great pleasure for us in many ways Pursuing Hagedorn's intellectual development we have tried to reflect on the core questions of humanity according to Ernst Bloch Who are we Where do we come from and Where are we heading In this way and without knowing it Konrad Hagedorn initiated a collective action process he would have very much enjoyed if he had been allowed to take part in it But it was our aim and constant motivation to surprise him with this collection of essays in his honour Konrad Hagedorn was reared as the youngest child of a peasant family on a small farm in the remote moorland of East Frisia Germany During his childhood in the poverty ridden years after the Second World War he faced a life where humans were heavily dependent on using nature around them for their livelihoods meanwhile he learned about the fragility of the environment As a boy he tended a one room schoolhouse where his great intellectual talents were first recognised and used for co teaching his schoolmates These early teaching experiences might have laid the foundations for his later becoming a dedicated lecturer and mentor

Reconciling Energy, the Environment and Sustainable Development Maria João C. Pereira Rolim, 2019-08-13 Challenged by sustainability imperatives the world faces a transition in how it uses and produces energy Yet despite the indisputable interdependence between energy and the environment law in these two areas has developed separately with little consideration for how the logic and aims of each might be reconciled This innovative book addresses this crucial nexus exploring the role that law must inevitably play as the effects of fossil fuel induced climate change continue to radically affect every aspect of life on Earth Focusing on the emerging concept of reflexive regulation the analysis takes giant steps in paving the way for effective legal engagement in the energy transition process Issues and topics explored in detail include the following energy's distinctive characteristic as an economic activity that works in a chain relation of physical aspects of energy to its legal and social dimensions main aspects of regulation environmental law and the concept of sustainability specific security of supply challenges faced by the industry and emergence and worldwide adoption of the environmental impact assessment as a procedural mechanism and its connection with Reflexive Regulation The author supports her arguments with detailed and critical examination of the regulation theoretical framework and includes citations of case law rules and regulations from diverse jurisdictions A case study on the development of the Brazilian electricity sector an exemplary case considering the country's abundance of natural energy resources industrial efficiency prerogatives regulatory incentives to ensure investment in supply expansion and increasing demands in meeting sustainability objectives all as highlighted by ongoing litigation illustrates the arguments put forward This book makes a substantial contribution to developing a framework aimed at linking potential divergent policy objectives in diverse and distinct interdependent fields It will be welcomed by energy

Firms, Governments, and Climate Policy Carlo Carraro,Christian Egenhofer,2003 The Kyoto Protocol to reduce greenhouse gases GHGs in the majority of industrialised countries is the first small step on the way to an effective climate policy In the long term climate policy will call for greater GHG reductions and the full participation of the global community The five integrated chapters of this book review theoretical findings and empirical evidence in the search for the right incentives which could induce firms and governments to undertake GHG abatement measures This book analyses the policy mixes that provide the best possible incentives for firms and governments to act on climate change and sign up to international climate agreements In doing so the authors address a multitude of related issues including the linkages between flexible mechanisms and voluntary agreements regulation and taxation the opportunities and barriers of the Kyoto Protocol for industry and the incentives for firms to undertake climate related R D and investments As well as illustrating the environmental benefits and cost effectiveness of alternative policy mixes in reducing GHG emissions the authors also offer sensible policy prescriptions for increasing the numbers of countries that ratify and implement climate agreements Environmental and resource economists environmental scientists climate analysts and policymakers should all read this book which offers an authoritative contribution to what is arguably the most critical contemporary environmental policy issue

Nature and Agriculture in the European Union Floor Brouwer, Jan van der Straaten, 2002 Nature and agriculture both shape the European countryside and one of the main challenges for the years to come will be to strengthen their interaction for the future development of rural areas In this valuable and highly topical book the authors demonstrate how economics and ecology can play a critical role in maintaining and sustaining this relationship The book identifies the dilemmas facing European agriculture and explores their economic and ecological consequences The authors believe a better understanding of these problems will be crucial in recognising the potential options for the future role of agriculture and nature policy and will guide the identification of suitable policy instruments They highlight current threats to the relationship between agriculture and nature such as abandonment and intensification and demonstrate how these problems can be resolved by a rational policy mix The book also provides extensive empirical evidence from four case studies and concludes by scrutinising the major changes in market conditions and the Common Agricultural Policy which could upset this important but fragile balance between agriculture and nature Providing a state of the art overview of current thinking on the relationship between agriculture and nature in the context of EU policy this book will be welcomed by policymakers and those studying and working in the fields of agricultural and resource economics geography and agri business Agriculture and Human Values, 2008
