on the search in his article God in the Brain highlighting studies searching for specific neurological centers of spirituality It s been said before but the brain is the final frontier Just how that brain creates not only awareness but also integrates that awareness into creating experiences memories and an enduring sense of self well it might take overhauling not only how we study ourselves but how we define our reality in the process of looking

Rethinking Consciousness Michael S A Graziano,2019-09-17 A first class intellectual adventure Brian Greene author of *Until the End of Time* Illuminating his groundbreaking theory of consciousness known as the attention schema theory Michael S A Graziano traces the evolution of the mind over millions of years with examples from the natural world to show how neurons first allowed animals to develop simple forms of attention and then to construct awareness of the external world and of the self His theory has fascinating implications for the future it may point the way to engineers for building consciousness artificially and even someday taking the natural consciousness of a person and uploading it into a machine for a digital afterlife

In Consciousness We Trust Hakwan Lau,2022 In *Consciousness We Trust* is a synthesis of Hakwan Lau's 20 year research programme exploring the neuroscience of consciousness Discussing studies from his own laboratory Lau uses various neuroscience techniques to address challenging philosophical questions about the nature of our subjective experience

Consciousness Demystified Todd E. Feinberg,Jon M. Mallatt,2025-02-04 Demystifying consciousness how subjective experience can be explained by natural brain and evolutionary processes Consciousness is often considered a mystery How can the seemingly immaterial experience of consciousness be explained by the material neurons of the brain There seems to be an unbridgeable gap between understanding the brain as an objectively observed biological organ and accounting for the subjective experiences that come from the brain and life processes In this book Todd Feinberg and Jon Mallatt attempt to demystify consciousness to naturalize it by explaining that the subjective experiencing aspects of consciousness are created by natural brain processes that evolved in natural ways Although subjective experience is unique in nature they argue it is not necessarily mysterious We need not invoke the unknown or unknowable to explain its creation Feinberg and Mallatt flesh out their theory of neurobiological naturalism after John Searle's biological naturalism that recognizes the many features that brains share with other living things lists the neural features unique to conscious brains and explains the subjective objective barrier naturally They investigate common neural features among the diverse

groups of animals that have primary consciousness the type of consciousness that experiences both sensations received from the world and affects such as emotions They map the evolutionary development of consciousness and find an uninterrupted progression over time without inserting any mysterious forces or exotic physics Finally bridging the previously unbridgeable they show how subjective experience although different from objective observation can be naturally explained

The Conscious Brain Jesse J. Prinz, 2012-09-13 The problem of consciousness continues to be a subject of great debate in cognitive science Synthesizing decades of research *The Conscious Brain* advances a new theory of the psychological and neurophysiological correlates of conscious experience Prinz's account of consciousness makes two main claims first consciousness always arises at a particular stage of perceptual processing the intermediate level and second consciousness depends on attention Attention changes the flow of information allowing perceptual information to access memory systems Neurobiologically this change in flow depends on synchronized neural firing Neural synchrony is also implicated in the unity of consciousness and in the temporal duration of experience Prinz also explores the limits of consciousness We have no direct experience of our thoughts no experience of motor commands and no experience of a conscious self All consciousness is perceptual and it functions to make perceptual information available to systems that allows for flexible behavior Prinz concludes by discussing prevailing philosophical puzzles He provides a neuroscientifically grounded response to the leading argument for dualism and argues that materialists need not choose between functional and neurobiological approaches but can instead combine these into neurofunctional response to the mind body problem *The Conscious Brain* brings neuroscientific evidence to bear on enduring philosophical questions while also surveying challenging and extending philosophical and scientific theories of consciousness All readers interested in the nature of consciousness will find Prinz's work of great interest

The Rosetta Stone of the Human Mind Vincenzo Sanguineti, 2006-12-26 The study of the brain mind complex has been hampered by the dichotomy between objective biological neuroscience and subjective psychological science This book presents a new theoretical model for how to translate between the two using a third language nonlinear physics and mathematics It illustrates how the simultaneous use of these two approaches enriches the understanding of the neural and mental realms
