*Student's Solutions Manual for Discrete Mathematics with Applications* Thomas Koshy, 2004      **Integrated Macro-Micro-Modelling Under Rational Expectations** Michael Malakellis, 2012-12-06. This monograph is concerned with the formulation and implementation of ORANI INT, an intertemporal Computable General Equilibrium CGE model of the Australian economy. The aim is to bring together in a balanced approach theory and data for the purpose of developing a practical state of the art tool for policy analysis. The modelling approach adopted is motivated by the recent trend in economy wide modelling to combine the respective strengths of traditional CGE models and modern macroeconomic models. Traditional CGE models typically provide a disaggregate representation of the economy at a single point in time. Such models are useful for analysing issues involving the allocation of resources among the various agents identified at a particular point in time. Modern macroeconomic models on the other hand usually provide an aggregate representation of the economy over many points in time. Such models are useful for analysing issues involving the allocation of resources across time. A model that combines the strengths of static CGE models and modern macro dynamic models is

amenable to addressing a wide range of policy issues To demonstrate this point ORANI INT is used to analyse tariff reform
