Approach Arshdeep Bahga,Vijay Madisetti,2013-12-09 About the Book Recent industry surveys expect the cloud computing services market to be in excess of 20 billion and cloud computing jobs to be in excess of 10 million worldwide in 2014 alone In addition since a majority of existing information technology IT jobs is focused on maintaining legacy in house systems the demand for these kinds of jobs is likely to drop rapidly if cloud computing continues to take hold of the industry However there are very few educational options available in the area of cloud computing beyond vendor specific training by cloud providers themselves Cloud computing courses have not found their way yet into mainstream college curricula This book is written as a textbook on cloud computing for educational programs at colleges It can also be used by cloud service providers who may be interested in offering a broader perspective of cloud computing to accompany their own customer and employee training programs The typical reader is expected to have completed a couple of courses in programming using traditional high level languages at the college level and is either a senior or a beginning graduate student in one of the science technology engineering or mathematics STEM fields We have tried to write a comprehensive book that transfers knowledge through an immersive hands on approach where the reader is provided the necessary guidance and knowledge to develop working code for real world cloud applications Additional support is available at the book s website www.cloudcomputingbook.info Organization The book is organized into three main parts Part I covers technologies that form the foundations of cloud computing These include topics such as virtualization load balancing scalability elasticity deployment and replication Part II introduces the reader to the design programming aspects of cloud computing Case studies on design and implementation of several cloud applications in the areas such as image processing live streaming and social networks analytics are provided Part III introduces the reader to specialized aspects of cloud computing including cloud application benchmarking cloud security multimedia applications and big data analytics Case studies in areas such as IT healthcare transportation networking and education are provided **Algorithms for VLSI Physical Design Automation** Naveed A. Sherwani,2012-12-06 Algorithms for VLSI Physical Design Automation Second Edition is a core reference text for graduate students and CAD professionals Based on the very successful First Edition it provides a comprehensive treatment of the principles and algorithms of VLSI physical design presenting the concepts and algorithms in an intuitive manner Each

chapter contains 3 4 algorithms that are discussed in detail Additional algorithms are presented in a somewhat shorter format References to advanced algorithms are presented at the end of each chapter Algorithms for VLSI Physical Design Automation covers all aspects of physical design In 1992 when the First Edition was published the largest available microprocessor had one million transistors and was fabricated using three metal layers Now we process with six metal layers fabricating 15 million transistors on a chip Designs are moving to the 500 700 MHz frequency goal These stunning developments have significantly altered the VLSI field over the cell routing and early floorplanning have come to occupy a central place in the physical design flow This Second Edition introduces a realistic picture to the reader exposing the concerns facing the VLSI industry while maintaining the theoretical flavor of the First Edition New material has been added to all chapters new sections have been added to most chapters and a few chapters have been completely rewritten The textual material is supplemented and clarified by many helpful figures Audience An invaluable reference for professionals in layout design automation and physical design

Improved Designs for Application Virtualization Chung-Ping Hung, 2012 We propose solutions for application virtualization to mitigate the performance loss in streaming and browser based applications For the application streaming we propose a solution which keeps operating system components and application software at the server and streams them to the client side for execution This architecture minimizes the components managed at the clients and improves the platform level incompatibility The runtime performance of application streaming is significantly reduced when the required code is not properly available on the client side To mitigate this issue and boost the runtime performance we propose prefetching i e speculatively delivering code blocks to the clients in advance The probability model on which our prefetch method is based may be very large To manage such a probability model and the associated hardware resources we perform an information gain analysis We draw two lower bounds of the information gain brought by an attribute set required to achieve a prefetch hit rate We organize the probability model as a look up table LUT Similar to the memory hierarchy which is widely used in the computing field we separate the single LUT into two level hierarchical LUTs To separate the entries without sorting all entries we propose an entropy based fast LUT separation algorithm which utilizes the entropy as an indicator Since the domain of the attribute can be much larger than the addressable space of a virtual memory system we need an efficient way to allocate each LUT s entry in a limited memory address space Instead of using expensive CAM we use a hash function to convert the attribute values into addresses We propose an improved version of the Pearson hashing to reduce the collision rate with little extra complexity Long interactive delays due to network delays are a significant drawback for the browser based application virtualization To address this we propose a distributed infrastructure arrangement for browser based application virtualization which reduces the average communication distance among servers and clients We investigate a hand off protocol to deal with the user mobility in the browser based application virtualization Analyses and simulations for information based prefetching and for mobile

applications are provided to quantify the benefits of the proposed solutions
