Dale A. Schoeller, M. Westerterp, 2017-08-15 Diet is a major factor in health and disease Controlled long term studies in humans are impractical and investigators have utilized long term epidemiological investigations to study the contributions of diet to the human condition Such studies while valuable have often been limited by contradictory findings a limitation secondary to systematic errors in traditional self reported dietary assessment tools that limit the percentage of variances in diseases explained by diet New approaches are available to help overcome these limitations and *Advances in the Assessment of Dietary Intake* is focused on these advances in an effort to provide more accurate dietary data to understand human health Chapters cover the benefits and limitations of traditional self report tools strategies for improving the validity of dietary recall and food recording methods objective methods to assess food and nutrient intake assessment of timing and meal patterns using glucose sensors and physical activity patterns using validated accelerometers *Advances in the Assessment of*

Dietary Intake describes new avenues to investigate the role of diet in human health and serves as the most up to date reference and teaching tool for these methods that will improve the accuracy of dietary assessment and lay the ground work for future studies

Energy metabolism Patrick Christian Even,2014-11-03

Energy metabolism is central to life and altered energy expenditure EE is often cited as a central mechanism responsible for development of the obese phenotype Resting EE EE of physical activity cold induced thermogenesis and thermic effect of feeding add to produce total EE but can also affect each other It is thus very important that each component be well measured Measuring energy expenditure by indirect calorimetry is extremely simple in theory but the practice is far more difficult Taking into account temperature in small sized animals measuring accurately the effect of activity on EE correcting EE for body size body composition age sex etc add difficulties in producing reliable data The goal of this Research Topic was to call for the practical experience of main investigators trained to practice calorimetry in order to get their feedback and the way they deal with the various and specific problems of humans and animal calorimetry The goal is to share the questions solutions experienced by the contributors to initiate a guide of the good practices that can be periodically updated and used by all those who are and will be interested in measuring energy metabolism from the 20g mouse to the human and large farm animals *Canadian Journal of Zoology* ,2009 *Proceedings* ,2009 **Journal of Experimental Biology** ,2001
