Applications of Evolutionary Computation Cecilia Di Chio, 2011-04-27 This book constitutes the refereed proceedings of the International Conference on the Applications of Evolutionary Computation EvoApplications 2011 held in Torino Italy in April 2011 colocated with the Evo 2011 events Thanks to the large number of submissions received the proceedings for EvoApplications 2011 are divided across two volumes LNCS 6624 and 6625 The present volume contains contributions for EvoCOMNET EvoFIN EvoIHOT EvoMUSART EvoSTIM and EvoTRANSLOC The 51 revised full papers presented were carefully reviewed and selected from numerous submissions This volume presents an overview about the latest research in EC Areas where evolutionary computation techniques have been applied range from telecommunication networks to complex systems finance and economics games image analysis evolutionary music and art parameter optimization scheduling and logistics These papers may provide guidelines to help new researchers tackling their own problem using EC [Handbook of Genetic Programming Applications](#) Amir H. Gandomi, Amir H. Alavi, Conor Ryan, 2015-11-06 This contributed volume written by leading international researchers reviews the latest developments of genetic programming GP and its key applications in solving current real world problems such as energy conversion and management financial analysis engineering modeling and design and software engineering to name a few Inspired by natural evolution the use of GP has expanded significantly in the last decade in almost every area of science and engineering Exploring applications in a variety of fields the information in this volume can help optimize computer programs throughout the sciences Taking a hands on approach this book provides an invaluable reference to practitioners providing the necessary details required for a successful application of GP and its branches to challenging problems ranging from drought prediction to trading volatility It also demonstrates the evolution of GP through major developments in GP studies and applications It is suitable for advanced students who wish to use relevant book chapters as a basis to pursue further research in these areas as well as experienced practitioners looking to apply GP to new areas The book also offers valuable supplementary material for design courses and computation in engineering

Metaheuristics for Big Data Clarisse Dhaenens, Laetitia Jourdan, 2016-08-16 Big Data is a new field with many technological challenges to be understood in order to use it to its full potential These challenges arise at all stages of working with Big Data beginning with data generation and acquisition The storage and management phase presents two critical challenges infrastructure for storage and transportation and conceptual models Finally to extract meaning from Big Data requires complex analysis Here the authors propose using metaheuristics as a solution to these challenges they are first able to deal with large size problems and secondly flexible and therefore easily adaptable to different types of data and different contexts The use of metaheuristics to overcome some of these data mining challenges is introduced and justified in the first part of the book alongside a specific protocol for the performance evaluation of algorithms An introduction to metaheuristics follows The second part of the book details a number of data mining tasks including clustering association rules supervised

classification and feature selection before explaining how metaheuristics can be used to deal with them This book is designed to be self contained so that readers can understand all of the concepts discussed within it and to provide an overview of recent applications of metaheuristics to knowledge discovery problems in the context of Big Data Advances in Engineering Materials, Structures and Systems: Innovations, Mechanics and Applications Alphose Zingoni,2019-08-21 Advances in Engineering Materials Structures and Systems Innovations Mechanics and Applications comprises 411 papers that were presented at SEMC 2019 the Seventh International Conference on Structural Engineering Mechanics and Computation held in Cape Town South Africa from 2 to 4 September 2019 The subject matter reflects the broad scope of SEMC conferences and covers a wide variety of engineering materials both traditional and innovative and many types of structures The many topics featured in these Proceedings can be classified into six broad categories that deal with i the mechanics of materials and fluids elasticity plasticity flow through porous media fluid dynamics fracture fatigue damage delamination corrosion bond creep shrinkage etc ii the mechanics of structures and systems structural dynamics vibration seismic response soil structure interaction fluid structure interaction response to blast and impact response to fire structural stability buckling collapse behaviour iii the numerical modelling and experimental testing of materials and structures numerical methods simulation techniques multi scale modelling computational modelling laboratory testing field testing experimental measurements iv innovations and special structures nanostructures adaptive structures smart structures composite structures bio inspired structures shell structures membranes space structures lightweight structures long span structures tall buildings wind turbines etc v design in traditional engineering materials steel concrete steel concrete composite aluminium masonry timber glass vi the process of structural engineering conceptualisation planning analysis design optimization construction assembly manufacture testing maintenance monitoring assessment repair strengthening retrofitting decommissioning The SEMC 2019 Proceedings will be of interest to civil structural mechanical marine and aerospace engineers Researchers developers practitioners and academics in these disciplines will find them useful Two versions of the papers are available Short versions intended to be concise but self contained summaries of the full papers are in this printed book The full versions of the papers are in the e book Application of Optimization Algorithms in Chemistry Jorge M. Dagli,1996 **Animal Agriculture** Fuller W. Bazer,G. Cliff Lamb,Guoyao Wu,2019-10-25 Animal Agriculture Sustainability Challenges and Innovations discusses the land based production of high quality protein by livestock and poultry and how it plays an important role in improving human nutrition growth and health With exponential growth of the global population and marked rises in meat consumption per capita demands for animal source protein are expected to increase 72% between 2013 and 2050 This raises concerns about the sustainability and environmental impacts of animal agriculture An attractive

solution to meeting increasing needs for animal products and mitigating undesirable effects of agricultural practices is to enhance the efficiency of animal growth reproduction and lactation Currently there is no resource that offers specific knowledge of both animal science and technology including biotechnology for the sustainability of animal agriculture for the expanding global demand of food in the face of diminishing resources This book fills that gap giving readers all the necessary information on important issues facing modern animal agriculture namely its sustainability challenges and innovative solutions Integrates new knowledge in animal breeding biotechnology nutrition reproduction and management Addresses the urgent issue of sustainability in modern animal agriculture Provides practical solutions on how to solve the current and future problems that face animal agriculture worldwide *Encyclopedia of Animal Behavior: G-P* Michael D.
