Types of bias

Sampling bias: The data provided often doesn't represent the whole population.

Non-response bias: Questionnaire responses of some only take.

Systematic Sampling

To find nth interval = $\frac{\text{Total population}}{\text{Sample size}}$

Simple random sampling

Every member of the population has an equal chance of being selected.

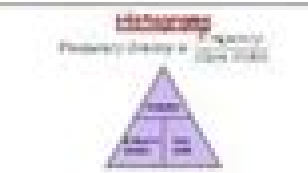

Systematic random sampling

Members are selected from a list at regular intervals.

Stratified Sampling

Population is divided into strata based on characteristics.

Sample is taken from each stratum in proportion to its size.

Quantitative Research

- Measuring level of the frequency of each case.
- For discrete data, use tally groups - put the points and give frequency points, all members of a group (used for continuous data).
- For discrete data, use frequency table.
- For grouped data, use frequency table.

Qualitative Research

- Non-numerical data.
- Open-ended questions.
- Interviews.
- Focus groups.
- Case studies.
- Diaries.
- Observations.
- Content analysis.

Types of bias

- Sampling bias:** The data provided often doesn't represent the whole population.
- Non-response bias:** Questionnaire responses of some only take.

Sampling

- Population - everything in the study that you want to study.
- Sample - a subset of the population.
- Simple random sampling - every member of the population has an equal chance of being selected.
- Systematic random sampling - members are selected from a list at regular intervals.
- Stratified random sampling - population is divided into strata based on characteristics. Sample is taken from each stratum in proportion to its size.

Sampling Method	Advantages	Disadvantages	When to use	Notes
Simple random sampling	Every member has an equal chance of being selected.	Time-consuming and expensive.	When the population is small and homogeneous.	Use a random number generator.
Systematic random sampling	Easy to implement.	May introduce bias if there is a pattern in the population.	When the population is large and homogeneous.	Use a random starting point and a fixed interval.
Stratified random sampling	Ensures all groups are represented.	Time-consuming and expensive.	When the population is heterogeneous.	Divide the population into strata based on a characteristic.
Cluster sampling	Easy to implement.	May introduce bias if clusters are not representative.	When the population is large and heterogeneous.	Divide the population into clusters.

Measures of Central Tendency

- Mean:** The average of all the data.
- Median:** The middle value of the data.
- Mode:** The most frequent value of the data.
- Range:** The difference between the highest and lowest values.
- Interquartile Range (IQR):** The difference between the first and third quartiles.
- Standard Deviation (SD):** A measure of the spread of the data.
- Variance:** The square of the standard deviation.
- Kurtosis:** A measure of the 'tailedness' of the data.
- Skewness:** A measure of the asymmetry of the data.

Measures of Dispersion

- Range:** The difference between the highest and lowest values.
- Interquartile Range (IQR):** The difference between the first and third quartiles.
- Standard Deviation (SD):** A measure of the spread of the data.
- Variance:** The square of the standard deviation.
- Kurtosis:** A measure of the 'tailedness' of the data.
- Skewness:** A measure of the asymmetry of the data.
