Microbiome and Machine Learning, Volume II Erik Bongcam-Rudloff, Marcus Claesson, Aldert Zomer, Randi Jacobsen Bertelsen, Isabel Moreno Indias, Domenica D'Elia, 2024-10-24 Due to the success of Microbiome and Machine Learning which collected research results and perspectives of researchers working in the field of machine learning ML applied to the analysis of microbiome data we are launching the second volume to collate any new findings in the field to further our understanding and encourage the participation of experts worldwide in the discussion The success of ML algorithms in the field is substantially due to their capacity to process high dimensional data and deal with uncertainty and noise However to

maximize the combinatorial potential of these emerging fields microbiome and ML researchers have to deal with some aspects that are complex and inherently related to microbiome data Microbiome data are convoluted noisy and highly variable and non standard analytical methodologies are required to unlock their clinical and scientific potential Therefore although a wide range of statistical modelling and ML methods are available their application is only sometimes optimal when dealing with microbiome data
