Environmental Politics and Governance in the Anthropocene Philipp Pattberg, Fariborz Zelli, 2016-01-13 The term Anthropocene denotes a new geological epoch characterized by the unprecedented impact of human activities on the Earth's ecosystems While the natural sciences have advanced their understanding of the drivers and processes of global change considerably over the last two decades the social sciences lag behind in addressing the fundamental challenge of governance and politics in the Anthropocene This book attempts to close this crucial research gap in particular with regards to the following three overarching research themes i the meaning sense making and contestations emerging around the concept of the Anthropocene related to the social sciences ii the role and relevance of institutions both formal and informal as well as international and transnational for governing in the Anthropocene and iii the role and relevance of accountability and other democratic principles for governing in the Anthropocene Drawing together a range of key thinkers in the field this volume provides one of the first authoritative assessments of global environmental politics and governance in the Anthropocene reflecting on how the planetary scale crisis changes the ways in which humans respond to the challenge This volume will be of great interest to students and scholars of global environmental politics and governance and sustainable development

Earth System Governance Frank Biermann, 2014-11-28 A new model for effective global environmental governance in an era of human caused planetary

transformation and disruption Humans are no longer spectators who need to adapt to their natural environment Our impact on the earth has caused changes that are outside the range of natural variability and are equivalent to such major geological disruptions as ice ages Some scientists argue that we have entered a new epoch in planetary history the Anthropocene In such an era of planet wide transformation we need a new model for planet wide environmental politics In this book Frank Biermann proposes earth system governance as just such a new paradigm Biermann offers both analytical and normative perspectives He provides detailed analysis of global environmental politics in terms of five dimensions of effective governance agency particularly agency beyond that of state actors architecture of governance from local to global levels accountability and legitimacy equitable allocation of resources and adaptiveness of governance systems Biermann goes on to offer a wide range of policy proposals for future environmental governance and a revitalized United Nations including the establishment of a World Environment Organization and a UN Sustainable Development Council new mechanisms for strengthened representation of civil society and scientists in global decision making innovative systems of qualified majority voting in multilateral negotiations and novel institutions to protect those impacted by global change Drawing on ten years of research Biermann formulates earth system governance as an empirical reality and a political necessity The

Anthropocene Debate and Political Science Thomas Hickmann,Lena Partzsch,Philipp Pattberg,Sabine Weiland,2018-09-03 Anthropocene has become an environmental buzzword It denotes a new geological epoch that is human dominated As mounting scientific evidence reveals humankind has fundamentally altered atmospheric geological hydrological biospheric and other Earth system processes to an extent that the risk of an irreversible system change emerges Human societies must therefore change direction and navigate away from critical tipping points in the various ecosystems of our planet This hypothesis has kicked off a debate not only on the geoscientific definition of the Anthropocene era but increasingly also in the social sciences However the specific contribution of the social sciences disciplines and in particular that of political science still needs to be fully established This edited volume analyzes from a political science perspective the wider social dynamics underlying the ecological and geological changes as well as their implications for governance and politics in the Anthropocene The focus is on two questions 1 What is the contribution of political science to the Anthropocene debate e g in terms of identified problems answers and solutions 2 What are the conceptual and practical implications of the Anthropocene debate for the discipline of political science Overall this book contributes to the Anthropocene debate by providing novel theoretical and conceptual accounts of the Anthropocene engaging with contemporary politics and policy making in the Anthropocene and offering a critical reflection on the Anthropocene debate as such The volume will be of great interest to students and scholars of political science global environmental politics and governance and sustainable development

Governance in the Age of the Anthropocene Markus Fraundorfer, 2022-02-10 Why has global governance largely failed to effectively tackle some of the most pressing global environmental challenges of our time What are the obstacles to effective global and planetary problem solving And which solutions and responses have global governance actors come up with to confront these challenges This textbook teases out the tragic entanglements between dominant global governance dynamics and the global environmental challenges of the Anthropocene showing how international and global cooperation mechanisms that evolved over the last two hundred years are deeply implicated in exacerbating many of today's global environmental challenges The book focuses on several global environmental challenges which are intrinsically interconnected threatening to destabilise the entire Earth system with serious consequences for human societies across the world These global environmental challenges include infectious disease outbreaks global food production processes the pollution of freshwater resources energy consumption patterns deforestation and CO2 emissions At the same time the book also presents several alternative governance examples based on more democratic citizen based and holistic approaches to the global climate crisis which point the way towards a new understanding of global governance in the age of the Anthropocene This textbook is for undergraduate and postgraduate students of global governance environmental politics and international relations **The**

Politics of the Anthropocene John S. Dryzek, Jonathan Pickering, 2018-12-06 The Politics of the Anthropocene is a sophisticated yet accessible treatment of how human institutions practices and principles need to be re thought in response to the challenges of the Anthropocene the emerging epoch of human induced instability in the Earth system and its life support capacities However the world remains stuck with practices and modes of thinking that were developed in the Holocene the epoch of around 12 000 years of unusual stability in the Earth system toward the end of which modern institutions such as states and capitalist markets arose These institutions persist despite their potentially catastrophic failure to respond to the challenges of the Anthropocene foremost among them a rapidly changing climate and accelerating biodiversity loss The pathological trajectories of these institutions need to be disrupted by advancing ecological reflexivity the capacity of structures systems and sets of ideas to question their own core commitments and if necessary change themselves while listening and responding effectively to signals from the Earth system This book envisages a world in which humans are no longer estranged from the Earth system but engage with it in a more productive relationship We can still pursue democracy social justice and sustainability but not as before In future all politics should be first and foremost a politics of the Anthropocene The arguments are developed in the context of issues such as climate change biodiversity and global efforts to address sustainability **Anthropocene Encounters: New Directions in Green Political Thinking**

Frank Biermann, Eva Löwbrand, 2019-02-07 Coined barely two decades ago the Anthropocene has become one of the most influential and controversial terms in environmental policy Yet it remains an ambivalent and contested formulation giving rise to a multitude of unexpected and often uncomfortable conversations This book traces in detail a broad variety of such Anthropocene encounters in science philosophy and literary fiction It asks what it means to think green in a time when nature no longer offers a stable backdrop to political analysis Do familiar political categories and concepts such as democracy justice power and time hold when confronted with a world radically transformed by humans The book responds by inviting more radical political thought plural forms of engagement and extended ethical commitments making it a fascinating and timely volume for graduate students and researchers working in earth system governance environmental politics and studies of the Anthropocene This is one of a series of publications associated with the Earth System Governance Project For more publications see www.cambridge.org/earth-system-governance

Dark Machines Victor Galaz, 2024-12-16 This book offers a critical primer on how Artificial Intelligence and digitalization are shaping our planet and the risks posed to society and environmental sustainability As the pressure of human activities accelerates on Earth so too does the hope that digital and artificially intelligent technologies will be able to help us deal with dangerous climate and environmental change Technology giants international think tanks and policy makers are increasingly keen to advance agendas that contribute to AI for Good or AI for the Planet Dark Machines explores why it is naive and dangerous to assume converging forces of a growing climate crisis and technological change will act synergistically to the benefit of people and the planet It explores why AI and associated digital technologies may lead to accelerated discrimination automated inequality and augmented diffusion of misinformation while simultaneously amplifying risks for people and the planet We face a profound challenge We can either allow AI accelerate the loss of resilience of people and our planet or we can decide to act forcefully in ways that redirects its destructive direction This urgent book will be of interest to students and researchers with an interest in Artificial Intelligence digitalization and automation social and political dimensions of science and technology and sustainability sciences

Environmental Law and Governance for the Anthropocene Louis Kotzé, 2017-06-15 The era of eco crises signified by the Anthropocene trope is marked by rapidly intensifying levels of complexity and unevenness which collectively present unique regulatory challenges to environmental law and governance This volume sets out to address the currently under theorised legal and consequent governance challenges presented by the emergence of the Anthropocene as a possible new geological epoch While the epoch has yet to be formally confirmed the trope and discourse of the Anthropocene undoubtedly already confront law and governance scholars with a unique challenge concerning the need to question and ultimately re imagine environmental law and governance interventions in the light of a new socio ecological situation the signs of which are increasingly apparent and urgent This volume does not aspire to offer a univocal response to Anthropocene exigencies and phenomena Any such attempt is in any case unlikely to do justice to the multiple implications

and characteristics of Anthropocene forebodings What it does is to invite an unrivalled group of leading law and governance scholars to reflect upon the Anthropocene and the implications of its discursive formation in an attempt to trace some initial often radical future facing and imaginative implications for environmental law and governance **Global Environmental Constitutionalism in the Anthropocene** Louis J Kotzé,2016-09-22 There is persuasive evidence suggesting we are on the brink of human induced ecological disaster that could change life on Earth as we know it There is also a general consensus among scientists about the pace and extent of global ecological decay including a realisation that humans are central to causing the global socio ecological crisis This new epoch has been called the Anthropocene Considering the many benefits that constitutional environmental protection holds out in domestic legal orders it is likely that a constitutionalised form of global environmental law and governance would be better able to counter the myriad exigencies of the Anthropocene This book seeks to answer this central question from the perspective of the Anthropocene what is environmental constitutionalism and how could it be extrapolated to formulate a global framework In answering this question this book offers the first systematic conceptual framework for global environmental constitutionalism in the epoch of the Anthropocene

Young,2017 An exploration of the need for innovative mechanisms of governance in an era when human actions are major drivers of environmental change The onset of the Anthropocene an era in which human actions have become major drivers of change on a planetary scale has increased the complexity of socioecological systems Complex systems pose novel challenges for governance because of their high levels of connectivity nonlinear dynamics directional patterns of change and emergent properties Meeting these challenges will require the development of new intellectual capital In this book Oran Young argues that to achieve sustainable outcomes in a world of complex systems we will need governance systems that are simultaneously durable enough to be effective in guiding behavior and agile enough to adapt to rapidly changing circumstances While some insights from past research on governance remain valid in this setting Young argues that we need new social capital to supplement mainstream regulatory approaches that feature rule making with an emphasis on compliance and enforcement He explores the uses of goal setting as a governance strategy the idea of principled governance and the role of what is often called good

governance in meeting the challenges of the Anthropocene Drawing on his long experience operating on the science policy frontier Young calls for more effective collaboration between analysts and practitioners in creating and implementing governance systems capable of producing sustainable outcomes in a world of complex systems
