Glasses and Grains Bertrand Duplantier, Thomas C. Halsey, Vincent Rivasseau, 2011-04-29 This tenth volume in the Poincar Seminar Series describes recent developments at one of the most challenging frontiers in statistical physics the deeply related fields of glassy dynamics especially near the glass transition and of the statics and dynamics of granular systems These fields are marked by a vigorous interchange between experiment theory and numerical studies all of which are well represented by the leading experts who have contributed articles to this volume These articles are also highly pedagogical as befits their origin in lectures to a broad scientific audience Highlights include a Galilean dialogue on the mean field and competing theories of the glass transition a wide ranging survey of colloidal glasses and experimental as well as theoretical treatments of the relatively new field of dense granular flows This book should be of broad general interest to both physicists and mathematicians

Poincaré Seminar 2003 Jean Dalibard, Vincent Rivasseau, 2004-05-24 This volume contains the third and fourth Poincar Seminar both held in 2003 The third one is devoted to Bose Einstein Condensation it covers the physics of superfluid liquid helium as well as the recently discovered atomic Bose Einstein condensates Major experimental results are presented together with relevant theoretical approaches and remaining open questions The fourth one is devoted to Entropy giving a comprehensive account of the history and various realizations of this concept from thermodynamics to black holes and includes theoretical and experimental discussions of the corresponding fluctuations for mesoscopic systems near equilibrium
