## **Global Expressions Global Expressions:**

Verification of Sequential and Concurrent Programs Krzysztof Apt, Frank S. de Boer, Ernst-Rüdiger Olderog, 2010-10-14  
HIS BOOK CONTAINS a most comprehensive text that presents syntax directed and compositional methods for the formal verification of programs The approach is not language bounded in the sense that it covers a large variety of programming models and features that appear in most modern programming languages It covers the classes of sequential and parallel deterministic and non deterministic distributed and object oriented programs For each of the classes it presents the various criteria of correctness that are relevant for these classes such as interference freedom deadlock freedom and appropriate notions of liveness for parallel programs Also special proof rules appropriate for each class of programs are presented In spite of this diversity due to the rich program classes considered there exist a uniform underlying theory of verification which is synt oriented and promotes compositional approaches to verification leading to scalability of the methods The text strikes the proper balance between mathematical rigor and dactile introduction of increasingly complex rules in an incremental manner adequately supported by state of the art examples As a result it can serve as a textbook for a variety of courses on different levels and varying durations It can also serve as a reference book for researchers in the theory of verification in particular since it contains much material that never before appeared in book form This is specially true for the treatment of object oriented programs which is entirely novel and is strikingly elegant

**Darwin and Facial Expression** Paul Ekman, 2006 In Darwin and Facial Expression Paul Ekman and a cast of other notable scholars and scientists reconsider the central concepts and key sources of information in Darwin's work on emotional expression First published in 1972 to celebrate the centennial of the publication of Darwin's The Expression of the Emotions in Man and Animals Darwin and Facial Expression is the first of three works edited by Dr Ekman and others on the subject This Malor edition contains new and updated references Darwin claimed that we cannot understand human emotional

expression without understanding the emotional expressions of animals as our emotional expressions are in large part determined by our evolution. Not only are there similarities in the appearance of some emotional expressions between man and certain other animals but the principles that explain why a particular emotional expression occurs with a particular emotion also apply across species.

*Foundations of Software Science and Computation Structures* Mogens Nielsen, Uffe Engberg, 2002-03-22 ETAPS 2002 is the fifth instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprises five conferences: FOSSACS, FASE, ESOP, CC, TACAS, thirteen satellite workshops, ACL2, AGT, CMCS, COCV, DCC, INT, LDFA, SC, SFEDL, SLAP, SPIN, TPTS, and VISS, eight invited lectures, not including those that are specific to the satellite events and several tutorials. The events that comprise ETAPS address various aspects of the system development process including specification, design, implementation, analysis, and improvement. The languages, methodologies, and tools which support these activities are all well within its scope. Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other. Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive.

*Multiphysics Modeling Using COMSOL?* Roger Pryor, 2011 Multiphysics Modeling Using COMSOL rapidly introduces the senior level undergraduate, graduate, or professional scientist or engineer to the art and science of computerized modeling for physical systems and devices. It offers a step by step modeling methodology through examples that are linked to the Fundamental Laws of Physics through a First Principles Analysis approach. The text explores a breadth of multiphysics models in coordinate systems that range from 1D to 3D and introduces the readers to the numerical analysis modeling techniques employed in the COMSOL Multiphysics software. After readers have built and run the examples, they will have a much firmer understanding of the concepts, skills, and benefits acquired from the use of computerized modeling techniques to solve their current technological problems and to explore new areas of application for their particular technological areas of interest.
