Hansen, 2016-04-19 Covering recent developments in satellite observation data undertaken for monitoring forest areas from global to national levels this book highlights operational tools and systems for monitoring forest ecosystems It also tackles the technical issues surrounding the ability to produce accurate and consistent estimates of forest area changes which are needed to report greenhouse gas emissions and removals from land use changes Written by leading global experts in the field this book offers a launch point for future advances in satellite based monitoring of global forest resources It gives readers a deeper understanding of monitoring methods and shows how state of art technologies may soon provide key data for creating more balanced policies

Earth Observation of Global Change Emilio Chuvieco, 2007-11-09 Global Change is increasingly considered a critical topic in environmental research Remote sensing methods provide a useful tool to monitor global variables since they provide a systematic coverage of the Earth's surface at different spatial spectral and temporal resolutions This book offers an analysis of the leading missions in global Earth observation and reviews the main fields in which remote sensing methods are providing vital data for global change studies *Earth Observations and Global Change Decision Making*, 1991 The bibliography contains 294 bibliographic citations and abstracts of relevant reports articles and documents announced in Scientific and Technical Aerospace Reports STAR and International Aerospace Abstracts IAA *Earth Observation for Land and Emergency Monitoring* Heiko Balzter, 2017-03-14 Earth Observation Science EOS is the study of the global Earth land ocean atmosphere system through observations The principal tools for such studies are measurements from space since these provide the coverage of the planet that is necessary to capture the behaviour of the entire coupled system In addition surface observations and measurements from aircraft balloons and sounding rockets provide valuable contributors to what are now termed integrated global observing systems Coupled with models the EOS measurement suites provide powerful tools for research into the factors controlling and changing the Earth system in which we live The objectives of this book are to describe new methods and applications of satellite technology in the fields of land and emergency monitoring It draws on new research outcomes from the European FP7 project GIONET European Centre of Excellence in Earth Observation Research Training GIONET combines industrial partners with universities and research institutes and this book provides a perspective on Earth Observation applications that is motivated by the cross fertilisation of both sectors Hence this book will find readers in both industry and academia This book highlights a broad range of innovative uses of Earth Observation technology to support environmental management decision making crisis management and climate policies It uses advanced concepts of multi sensor image integration multi temporal analysis and synergies between data and models This is a truly interdisciplinary subject that encompasses a range of applications in various fields which are discussed in detail throughout the text If you are interested in remote sensing applications and looking for inspiration this is the book for you **Earth**
