Global Warming The Plus Side:

A Crisis like No Other: Understanding and Defeating Global Warming Second Edition Robert De Saro, 2024-12-20 *A Crisis Like No Other Understanding and Defeating Global Warming* couples engaging and creative storytelling with accurate details to explain global warming. It covers both the technical and human issues of global warming by addressing what's causing global warming and why people don't believe it exists. The book tells readers how to convince others that global warming is not only real but life threatening and offers a clearly laid out path to solve it. The book is accurate and carefully researched drawing on the author's thirty years of studying the science of global warming and the human psyche that surrounds it. The author breaks down the subject into four parts which can be thought of as four mini books in one. The first part covers the psychology of global warming denial how to defend ourselves against its lies and fake news and how to convince others of global warming's grave harm. The second part describes exactly what global warming is. The third answers the question what makes us so sure. Finally the last part provides a road map showing us how to defeat global warming. This book is comprehensive fast paced and easily accessible to readers from all walks of life. It provides an overview of everything one needs to know about global warming and as such is an excellent survey of global warming topics. In addition to being an easy and enjoyable read for the general public *A Crisis Like No Other Understanding and Defeating Global Warming* serves as a handy primer on climate change for environmental science classes. [Encyclopedia of Global Warming and Climate Change, Second Edition](#) S. George Philander, 2012-06-13 The First Edition of the *Encyclopedia of Global Warming and Climate Change* provided a multi authored academic yet non technical resource for students and teachers to understand the importance of global warming to appreciate the effects of human activity and greenhouse gases around the world and to learn the history of climate change and the research enterprise examining it. This edition was well received with notable reviews. Since its publication the debate over the advent of global warming at least partially brought on by human enterprise has continued to ebb and flow depending literally on the weather politics and media coverage of climate summits and debates. Advances in research also change the discourse as new data is collected and new scientific projects continue to explore and explain global warming and climate change. Thus a new Second Edition updates more than half of the original entries and adds new perspectives and content to keep students and researchers up to date in a field that has proven provocatively lively.

Facing Up to Global Warming N.F. Gray, 2015-08-18 In this volume Professor N F Gray offers a comprehensive primer on climate change sustainability and how the two concepts are related. This book consists of fifteen chapters each treating a specific aspect of the current global crisis including scientific background as well as an up to date appraisal of the issue at hand. It covers the reasons behind climate change and the effect it will have on the planet and on the reader directly. Gray also presents readers with the means to assess their own environmental impact and details positive individual and community actions to address global warming. Climate change global warming and sustainability are phrases that almost

everyone has heard whether on the news or around the dinner table The increasing frequency of major events such as droughts severe storms and floods are beginning to make these concepts inescapable and being fully informed is an absolute necessity for students and indeed for us all Nick Gray PhD ScD is a founding member of the Environmental Sciences Unit 1979 at Trinity College Dublin which was the first center for postgraduate research and training in environmental science and technology in Ireland He has written a number of books and over 150 research papers and book chapters and currently serves as the Director of the Trinity Centre for the Environment
