Global Biomass Burning Atmospheric Climatic And Biospheric Implications:

Global Biomass Burning Joel S. Levine, 1991 This comprehensive volume is the first to consider biomass burning as a global phenomenon and to assess its impact on the atmosphere on climate and on the biosphere itself *Air Pollution and the Forests of Developing and Rapidly Industrializing Regions* John L. Innes, Abu Hassan Haron, 2000-06-27 This book examines the importance of air pollution for the forests of rapidly industrialising countries and regions Its geographical coverage includes South and Central America Africa and Asia including Siberia China and Korea The problems presented by air pollution are placed within the more general context of sustainable development within these regions and the historical legacy that they are attempting to deal with Attention is drawn to the very serious problems associated with poor air quality in cities such as Mexico City and Chongqing China Air pollution in these areas is amongst the worst in the world Several chapters examine the importance of forest fires as a source of air pollution with particular reference being made to the Southeast Asian fires in recent years The available information about the effects of this pollution on the surrounding forests is reviewed and recommendations are made for a better understanding of the impacts A final chapter reviews the recent developments in air pollution control policies in the different regions covered by the book **Fire, Climate Change, and Carbon Cycling in the Boreal Forest** Eric S. Kasischke, Brian J. Stocks, 2012-08-22 In boreal forests which contain large amounts of the world's terrestrial organic carbon fire is a natural and fundamental disturbance regime essential in controlling many ecosystem processes As a result of predicted climate change in the future the fire regime and consequently the forest cover and carbon storage of boreal regions will undergo dramatic alterations This volume discusses the direct and indirect mechanisms by which fire and climate interact to influence carbon cycling in North American boreal forests The first section summarizes the information needed to understand and manage fire's effects on the ecology of boreal forests and its influence on global climate change issues Following chapters discuss in detail the role of fire in the ecology of boreal forests Subsequent sections present data sets on fire and the distribution of carbon discuss the use of satellite imagery in monitoring these regions and discuss approaches to modeling the relevant processes The book offers the following new results improved estimates of carbon released during fires at a variety of scales from individual sites to the entire North American boreal forest region direct evidence of enhanced soil respiration after fire in Alaskan boreal forests studies of the influence of fire on long term forest succession patterns modeling results of the effects of climate warming on the fire regime examples of the use of satellite imagery to monitor surface characteristics important in carbon cycling modeling results of how climate change will interact with the fire regime to influence carbon storage **Proceedings of the International Symposium on Air Pollution and Climate Change Effects on Forest Ecosystems, February 5-9, 1996, Riverside, California**, 1998 **General Technical Report NC.**, 1981 **Acid Precipitation**, 1992-07 *Climate-Biosphere Interactions* Richard G. Zepp, 1994-04-27 From monitoring the methane emissions of a rice paddy field to studying climate changes in relation to

monsoon variations Climate Biosphere Interactions explores how the greenhouse effect may alter our world's agriculture and climate and ultimately how these changes may affect mankind Chapman Conference on Global Biomass Burning--Atmospheric, Climatic and Biospheric Implications, March 19-23, 1990, Williamsburg, Virginia Joel S. Van Wilgen, 1997 This is an overview of the South African Fire Atmosphere Research Initiative SAFARI an interdisciplinary project which involved over 150 scientists from 14 countries SAFARI investigated the relationship between fires and savanna ecology in southern Africa **International Boreal Forest Research Association Conference** International Boreal Forest Research Association. H. Bell, N. Price, B. Chakrabarti, 1996 Written by international experts in the field this book sets out the scientific arguments for and against the use of methyl bromide which is both naturally occurring and also a man made product believed to have played a significant role in the depletion of the ozone layer Methyl bromide is a widely used fumigant in agriculture horticulture and the preservation of structural materials The fate of this natural and man made chemical is the focus of much fierce debate with

scientific political social environmental and economic arguments for and against the production and use of this chemical This book does not set out to convince the reader of a predetermined viewpoint Its purpose is to set out the scientific debate covering the major relevant fields including agriculture atmospheric chemistry oceanography environmental sciences chemistry biology and toxicology as well as two chapters on potential alternatives to methyl bromide The authors who have contributed to this book are all experts who have played pivotal roles in the international debate on methyl bromide

C. Jarvis, B. F. Pain, 1997 This book examines the impact of gaseous nitrogen emissions from grasslands on atmospheric chemistry acid rain critical loads for ecosystems climate change and ozone levels The various stages of grassland production provide numerous opportunities for the escape of these environmentally active gases These stages are examined and methods for controlling the emissions are explored The interactions of the processes involved in the generation of these gases with other components of the overall nitrogen cycle are important and the chapters in this book look at these in terms of basic processes through to larger scale systems The book brings together the leading workers in this area and provides an up to date account of the research along with implications for practice in this environmentally sensitive field It is important reading for all grassland scientists those involved in research into livestock production using grass and rangelands along with advisors to the farming community It is also valuable for all those such as ecologists and conservationists concerned with pollution and the environment
