Global Carbon Footprints Global Carbon Footprints:

Global carbon footprints Christian Solli,2010 There is increasing public media and policy interest in the concepts of carbon footprints and the emissions associated with international trade Many wonder if our growing consumption of imported products offsets our gains in climate policy A variety of publications suggest that emission reductions in rich countries are offset by increased imports i e our national carbon footprint is growing while our territorial emissions are getting smaller Some refute this claim stating that the methods and data are unreliable while others acknowledge the issue but argue it is not important for climate policy This report aims to dispel some myths about carbon footprints and trade adjusted emission inventories A review of studies finds large variations between studies of the Nordic countries but closer inspection shows that many of the variations are due to inconsistent definitions and non comparable methods Calculations using a consistent global model provide updated estimates for the Nordic countries in 1997 2001 and 2004 A general observation for the Nordic countries is that the overall carbon footprint is larger than territorial based emissions and that the difference is increasing Further we also observe an increase in the total carbon footprint from 2001 to 2004 This stresses the need for policy makers to track the cause effect chains between consumption and production to understand and mitigate potential carbon leakage The study was carried out by researchers from CICERO and MiSA and was financed by the Nordic Council of Ministers

Global environmental footprints

Peters, Glen P.,Andrew, Robbie M.,Karstensen, Jonas,2016-08-09 Emissions and resources are typically allocated to national territories There has been increased interest in allocating environmental flows to the final consumption of goods and services The resulting environment footprints are particularly relevant for global environmental problems in a globalised world Developed countries generally have larger environmental footprints than their national territorial flows and the gap has tended to increase over the last two decades Consequently some have argued that environmental policies should address the environmental footprint Despite the potential policy relevance there has been relatively little research on policy applications While environmental footprints have many advantages policy applications are limited by estimation and interpretation uncertainty and by the lack of a clear policy motivation

The Carbon Footprint of Everything Mike

Berners-Lee,2022-04-26 I can t remember the last time I read a book that was more fascinating and useful and enjoyable Bill Bryson Reduce your carbon footprint and understand the issue with this up to date life guide for carbon conscious readers Kirkus Calculate your carbon footprint with an item by item breakdown Meet your company s carbon goals using the latest research Covid 19 and the carbon battle understand the new global supply chain The Carbon Footprint of Everything breaks items down by the amount of carbon they produce creating a calorie guide for the carbon conscious With engaging writing leading carbon expert Mike Berners Lee shares new carbon calculations based on recent research He considers the impact of the pandemic on the carbon battle especially the embattled global supply chain and adds items we didn t consider a decade

ago like bitcoin and other cryptocurrencies Supported by solid research cross referenced with other expert sources illustrated with easy to follow charts and graphs and written with Berners Lee s trademark sense of humor The Carbon Footprint of Everything should be on everyone s bookshelf The Carbon Footprint of Everything is an extensively revised and updated edition of How Bad Are Bananas **World Fossil Fuel Subsidies and Global Carbon Emissions in a Model with Interfuel Substitution** Bjorn Larsen,1994 **The Pocket Idiot's Guide to Your Carbon Footprint** Nancy S. Grant,2008 Attention on global climate change has reached a critical mass in this country and around the world People are beginning to demand answers from their leaders but they re also looking inward to see how the choices they make affect the environment As recently as a year ago few people had even heard of the term carbon footprint Now it s all over the news a commonplace term in the U K and increasingly in the U S The Pocket Idiot s Guide to Your Carbon Footprint is a highly practical and easy to use reference that helps readers do their part to combat global warming Carbon Footprint Analysis Matthew John Franchetti,Defne Apul,2012-06-18 The negative impacts of carbon emissions from human activities continue to dramatically reshape the environmental political and social landscape These impacts coupled with cap and trade schemes iterate the importance and need to properly measure and reduce greenhouse gas emissions Carbon Footprint Analysis Concepts Methods Implementation an *Facing Up to Global Warming* N.F. Gray,2015-08-18 In this volume Professor N F Gray offers a comprehensive primer on climate change sustainability and how the two concepts are related This book consists of fifteen chapters each treating a specific aspect of the current global crisis including scientific background as well as an up to date appraisal of the issue at hand It covers the reasons behind climate change and the effect it will have on the planet and on the reader directly Gray also presents readers with the means to assess their own environmental impact and details positive individual and community actions to address global warming Climate change global warming and sustainability are phrases that almost everyone has heard whether on the news or around the dinner table The increasing frequency of major events such as droughts severe storms and floods are beginning to make these concepts inescapable and being fully informed is an absolute necessity for students and indeed for us all Nick Gray PhD ScD is a founding member of the Environmental Sciences Unit 1979 at Trinity College Dublin which was the first center for postgraduate research and training in environmental science and technology in Ireland He has written a number of books and over 150 research papers and book chapters and currently serves as the Director of the Trinity Centre for the Environment **The Oxford Companion to Global Change** David J. Cuff,Andrew Goudie,2009 The Oxford Companion to Global Change is an up to date comprehensive interdisciplinary guide to the range of issues surrounding natural and human induced changes in the Earth s environment In one convenient volume the Companion brings together current knowledge about the relations between technological social demographic economic and political factors as well as biological chemical and physical systems It is an essential reference work for students teachers researchers and other professionals seeking to understand any aspect of

global change *The Global Carbon Cycle* Christopher B. Field, Michael R. Raupach, 2012-09-26 While a number of gases are implicated in global warming carbon dioxide is the most important contributor and in one sense the entire phenomena can be seen as a human induced perturbation of the carbon cycle The Global Carbon Cycle offers a scientific assessment of the state of current knowledge of the carbon cycle by the world's leading scientists sponsored by SCOPE and the Global Carbon Project and other international partners It gives an introductory overview of the carbon cycle with multidisciplinary contributions covering biological physical and social science aspects Included are 29 chapters covering topics including an assessment of carbon climate human interactions a portfolio of carbon management options spatial and temporal distribution of sources and sinks of carbon dioxide socio economic driving forces of emissions scenarios Throughout contributors emphasize that all parts of the carbon cycle are interrelated and only by developing a framework that considers the full set of feedbacks will we be able to achieve a thorough understanding and develop effective management strategies The Global Carbon Cycle edited by Christopher B Field and Michael R Raupach is part of the Rapid Assessment Publication series produced by the Scientific Committee on Problems of the Environment SCOPE in an effort to quickly disseminate the collective knowledge of the world's leading experts on topics of pressing environmental concern Carbon Emissions in China Zhu Liu, 2016-07-07 This study analyzes the spatial temporal pattern and processes of China's energy related carbon emissions Based on extensive quantitative analysis it outlines the character and trajectory of China's energy related carbon emissions during the period 1995 2010 examining the distribution pattern of China's carbon emissions from regional and sectoral perspectives and revealing the driving factors of China's soaring emission increase Further the book investigates the supply chain carbon emissions the carbon footprints of China's industrial sectors Anthropogenic climate change is one of the most serious challenges currently facing humankind China is the world's largest developing country top primary energy consumer and carbon emitter Achieving both economic growth and environmental conservation is the country's twofold challenge Understanding the status features and driving forces of China's energy related carbon emissions is a critical aspect of attaining global sustainability This work for the first time presents both key findings on and a systematic evaluation of China's carbon emissions from energy consumption The results have important implications for global carbon budgets and burden sharing with regard to climate change mitigation The book will be of great interest to readers around the world as it addresses a topic of truly global significance Wisconsin Greenhouse Gas Emissions Inventory, 1993 **Carbon Footprints and Food Systems** Paul Brenton, Gareth Edwards-Jones, Michael Friis Jensen, 2010-09-21 This report addresses carbon labeling schemes a high profile issue and one that has important economic implications for developing countries Carbon accounting and labeling instruments are designed to present information on greenhouse gas emissions GHG from supply chains These instruments have become an important awareness raising channel for governments producers retailers and consumers to bring about the reduction of GHGs At the same time they have emerged as a crucial element of supply

chain management trade logistics and potentially trade regulations between countries But the underlying science of GHG emissions is only partially developed Many of these schemes are based on rudimentary knowledge of GHG emissions and have mainly been designed by industrialized countries There is a concern that these systems do not accurately reflect production processes in developing countries and that they may even shift consumer preferences away from developing country exports The report includes an analysis of current and emerging carbon labeling schemes and an assessment of available data emissions factors and knowledge gaps of carbon footprinting methodologies The report also analyzes carbon accounting methodologies for sugar and pineapple products from Zambia and Mauritius according to PAS 2050 guidelines to illustrate whether these schemes accurately represent the production systems in developing countries The report concludes with a series of recommendations on how carbon footprint labeling can be made more development friendly TemaNord

Pricing Peter Cramton,David JC MacKay,Axel Ockenfels,Steven Stoft,2017-06-16 Why the traditional pledge and review climate agreements have failed and how carbon pricing based on trust and reciprocity could succeed After twenty five years of failure climate negotiations continue to use a pledge and review approach countries pledge almost anything subject to unenforced review This approach ignores everything we know about human cooperation In this book leading economists describe an alternate model for climate agreements drawing on the work of the late Nobel laureate Elinor Ostrom and others They show that a common commitment scheme is more effective than an individual commitment scheme the latter depends

on altruism while the former involves reciprocity we will if you will The contributors propose that global carbon pricing is the best candidate for a reciprocal common commitment in climate negotiations Each country would commit to placing charges on carbon emissions sufficient to match an agreed global price formula The contributors show that carbon pricing would facilitate negotiations and enforcement improve efficiency and flexibility and make other climate policies more effective Additionally they analyze the failings of the 2015 Paris climate conference Contributors Richard N Cooper Peter Cramton Ottmar Edenhofer Christian Gollier loi Laurent David JC MacKay William Nordhaus Axel Ockenfels Joseph E Stiglitz Steven Stoft Jean Tirole Martin L Weitzman
