Global Environmental Change The Threat To Human Health:

Global Environmental Change: The Threat to Human Health Samuel S. Myers, 2009-11 Over the past two to three hundred years humanity's ecological footprint has ballooned to such an extent that we are now fundamentally altering the planet. We have transformed the Earth's land surface and altered the function of its ecosystems and we are triggering the rapid loss of both terrestrial and marine life. We are also profoundly changing our planet's climate. It is increasingly apparent that the breadth and depth of the changes we are wreaking on the environment are imperiling not only many of the other species with which we share the ecological stage but the health and wellbeing of our own species as well. Global climate change threatens human health in numerous and profound ways. Large segments of the population will experience more heat waves, altered exposure to infectious disease and more frequent natural disasters. Most significantly, climatic disruption threatens the adequacy of the core building blocks of health for large populations around the globe: sufficient food and nutrition, safe water for drinking and sanitation, fresh air to breathe and secure homes to live in. As climate change dismantles these central elements of healthy societies, people with fewer resources will be forced to migrate in large numbers to lands where they may not be welcome. A likely result of all of these processes will be increased civic instability and strife.

Planetary Overload Anthony J. McMichael, 1993-10-07 The human species faces many threats to its health, perhaps to its survival. Taking an interesting perspective, *Planetary Overload* forcefully points out the consequences to human health of ongoing degradation of Earth's ecosystems. In a broad-based, accessible analysis, A. J. McMichael examines ecological disruptions, land degradation, ozone depletion, temperature increases and loss of genetic diversity through the extinction of species, among others, and compellingly demonstrates their potentially disastrous results, including food shortages, new and intensified disease patterns, rising seas, mass refugee problems and cancers, blindness and immune suppression from increased ultraviolet radiation. While other books on the subject analyse only the environmental impact of these problems, McMichael relates each of these insidious processes back to its ultimate impact on human health. He thoroughly considers these problems within a broad evolutionary, biological, social and economic context and also explores the underlying problems contributing to environmental breakdown, especially the relations between the world's rich and poor. This book will be of interest to environmentalists, public health professionals, policy makers, environmental studies and human ecology scholars and anyone wishing a lucid, rational assessment of today's pressing ecological concerns. **Society And Climate:**

Transformations And Challenges Nico Stehr, Amanda Machin, 2019-07-30 Climate has for a long time been taken for granted, background against which social, political and economic interactions have taken place. But this taken-for-granted background is cleaving. It is becoming hard to ignore the potential repercussions of a changing climate and the uneven impact of certain forms of human society and energy cultures that risk undermining their own environmental conditions. In a comprehensive and accessible way, this book *Coping with Global Environmental Change, Disasters and Security* Hans
