Gender Structured Population Modeling Gender Structured Population Modeling:

Gender-structured Population Modeling M. Iannelli, M. Martcheva, F. A. Milner, 2005-04-01 This book gives a unified presentation of and mathematical framework for modeling population growth by couple formation summarizing both past and present modeling results It provides results on model analysis gives an up to date review of mathematical demography discusses numerical methods and puts deterministic modeling of human populations into historical perspective

Mathematica Laboratories for Mathematical Statistics with CD-ROM Jenny A. Baglivo, 2004-11-01 Integrating computers into mathematical statistics courses allows students to simulate experiments and visualize their results handle larger data sets analyze data more quickly and compare the results of classical methods of data analysis with those using alternative techniques This text presents a concise introduction to the concepts of probability theory and mathematical statistics The accompanying in class and take home computer laboratory activities reinforce the techniques introduced in the text and are accessible to students with little or no experience with Mathematica These laboratory materials present applications in a variety of real world settings with data from epidemiology environmental sciences medicine social sciences physical sciences manufacturing engineering marketing and sports Included in the book are parametric nonparametric permutation bootstrap and diagnostic methods Permutation and bootstrap methods are discussed side by side with classical methods in the later chapters Includes a CD ROM with 238 laboratory problems written as Mathematica notebooks A Two-sex, Age-structured Population Model in Discrete-time Stephen Eric Tennenbaum, 2006 *Dynamic Population Models* Robert

Schoen, 2007-05-05 *Dynamic Population Models* is the first book to comprehensively discuss and synthesize the emerging field of dynamic modeling Incorporating the latest research it includes thorough discussions of population growth and momentum under gradual fertility declines the impact of changes in the timing of events on fertility measures and the complex relationship between period and cohort measures The book is designed to be accessible to those with only a minimal knowledge of calculus

modern tools of numerical analysis in finance *Computational And Mathematical Population Dynamics* Necibe Tuncer, Maia Martcheva, Olivia Prosper, Lauren Childs, 2023-06-21 This book is a collection of works that represent the recent advancements in computational and mathematical methods applied to population dynamics It concentrates on both development of new tools as well as on innovative use of existing tools to obtain new understanding of biological systems The volume introduces new state of the art techniques for defining and solving numerically control problems in mathematical biology in which the control appears linearly Such problems produce simpler optimal controls that can be implemented in practice The book further develops tools for fitting multi scale models to multi scale data and studying the practical identifiability of the parameters from multi scale data Novel model of Zika with Wolbahia infection in mosquitoes suggests that the most suitable control strategy to control Zika in the absence of Wolbahia is killing mosquitoes but the most suitable strategy when mosquitoes are Wolbahia infected is the treatment of humans A completely novel methodology of developing discrete continuous hybrid models of multi species interactions is also introduced together with avantgarde techniques for discrete continuous hybrid models analysis A mathematical model leads to new observations of the within host virus dynamics and its interplay with the immune responses In particular it is observed that the parameters promoting CTL responses need to be boosted over parameters promoting antibody production to obtain a biologically relevant steady state A novel stochastic model of COVID 19 investigates quarantine and lock down as important strategies for control and elimination of COVID 19 **Sensitivity Analysis: Matrix Methods in Demography and Ecology** Hal Caswell, 2019-04-02 This open access book shows how to use sensitivity analysis in demography It presents new methods for individuals cohorts and populations with applications to humans other animals and plants The analyses are based on matrix formulations of age classified stage classified and multistate population models Methods are presented for linear and nonlinear deterministic and stochastic and time invariant and time varying cases Readers will discover results on the sensitivity of statistics of longevity life disparity occupancy times the net reproductive rate and statistics of Markov chain models in demography They will also see applications of sensitivity analysis to population growth rates stable population structures reproductive value equilibria under immigration and nonlinearity and population cycles Individual stochasticity is a theme throughout with a focus that goes beyond expected values to include variances in demographic outcomes The calculations are easily and accurately implemented in matrix oriented programming languages such as Matlab or R Sensitivity analysis will help readers create models to predict the effect of future changes to evaluate policy effects and to identify possible evolutionary responses to the environment Complete with many examples of the application the book will be of interest to researchers and graduate students in human demography and population biology The material will also appeal to those in mathematical biology and applied mathematics Modeling and Data Analysis: An Introduction with Environmental Applications John B. Little, 2019-03-28 Can we coexist with the other life forms that have evolved on this planet Are there realistic alternatives to

fossil fuels that would sustainably provide for human society's energy needs and have fewer harmful effects How do we deal with threats such as emergent diseases Mathematical models equations of various sorts capturing relationships between variables involved in a complex situation are fundamental for understanding the potential consequences of choices we make Extracting insights from the vast amounts of data we are able to collect requires analysis methods and statistical reasoning This book on elementary topics in mathematical modeling and data analysis is intended for an undergraduate liberal arts mathematics type course but with a specific focus on environmental applications It is suitable for introductory courses with no prerequisites beyond high school mathematics A great variety of exercises extends the discussions of the main text to new situations and or introduces new real world examples Every chapter ends with a section of problems as well as with an extended chapter project which often involves substantial computing work either in spreadsheet software or in the R statistical package
