Engineering Singapore Scientific Singapore Nation Building

Class and Politics in Malaysian and Singaporean Nation Building Muhamad M. N. Nadzri, 2025-05-23 Nadzri explores a range of factors that have influenced nation building in Malaysia and Singapore with principal emphasis on the importance of social and economic class In contrast to previous studies on nation building which overwhelmingly rely on the explanatory power of culture race and ethnic community the book foregrounds the importance of social and economic status The three main themes explored in this book are how the nation building projected in each country is driven by the class interests of its ruling elites how elections have impacted the politics of nation building and how each country's nation building policies are designed to build political loyalty and support for the ruling elites The comparability of analytical outcomes using the prism of class interests uncovers the limitations of the explanatory power of race ethnic community and culture in understanding the social and political dynamics of the two countries A valuable read for scholars and students of politics in Malaysia and Singapore that will also be of interest to scholars of comparative approaches to nation building Scientific Information Bulletin, 1992

Ethics and Computing Kevin W. Bowyer, 2000-10-26 All you have to do is watch the news or be warned not to open your email today to recognize the necessity for this revised and enhanced edition of this critical work first published in 1995 We are inundated daily with intellectual property issues and warnings against computer viruses and hackers Government and law enforcement agency involvement in the security of our computer systems leaves us vulnerable to abuse of privacy and raises the specter of Big Brother Also many critical systems controlled by computers such as nuclear power facilities and missile defense systems are often designed and tested with an over reliance on computer modeling which can cause failure injury or loss of life Ethics and Computing Second Edition promotes awareness of these and other major issues and accepted procedures and policies in the area of ethics and computing using real world companies incidents products and people An entire chapter is dedicated to detailed analysis of the major ethical codes relevant to computing professionals The Association of Information Technology Professionals AITP code of ethics IEEE Institute of Electrical and Electronics Engineers code of ethics the Association of Computing Machinery codes of ethics and the ACM IEEE Software Engineering code of ethics Ethics and Computing Second Edition is ideally suited for topical undergraduate courses with chapters and assignments designed to encourage critical thinking and informed ethical decisions Furthermore this invaluable book will keep abreast computer science computer engineering and information systems professionals and their colleagues of current ethical issues and responsibilities *Human Capital Formation and Economic Growth in Asia and the Pacific* Wendy Dobson, 2013-07-18 The entire planet looks to Asian and other emerging markets to sustain growth momentum as traditional markets in the USA and Europe struggle with the slow and arduous processes of deleveraging after the global financial crisis At the same time there is growing recognition in Asia that the sources of growth must shift to sustain their own growth momentum in the years ahead Heavy reliance on the region's high savings rates and plentiful supplies of low cost labour will

have to shift towards increasing the human capital embodied in more educated and skilled labour forces capable of contributing to productivity growth and innovation as future drivers of growth Human Capital Formation and Economic Growth in Asia and the Pacific focuses on why and how countries are making this shift The demographic transition is shown to be a significant factor as ageing populations in Japan South Korea and China manage declining growth in the labour force by stepping up investments in education and by changing policies and institutions Lessons to be learned from these experiences by more youthful populations in Southeast Asia are explored In addition attention is paid to the consequences of cross border differentials in technical knowledge and the quantity and quality of human capital Several implications for public policy and for international cooperation on human capital issues in the Asian region are identified The chapters in this volume are edited versions of papers presented at the 35th Pacific Trade and Development conference held in Vancouver Canada in June 2012 The conference goal was to better understand how governments and business in Asia and the Pacific can apply the key insight that one of the reasons economies grow is because of human capital formation the quality and diversity of the labour force are augmented not just because the labour force grows in size Students of Asia s growth prospects will find several aspects of this volume of particular value It includes chapters on the big picture conceptual and measurement issues on country experiences in meeting the imperatives of the demographic transition and investing in education and skills training and on country experiences with attracting foreign knowledge and the supply and recruitment of skills across borders in Asia and the Pacific Policymakers will also find useful the discussions of policy implications and the menu of issues requiring intergovernmental cooperation within the Asian region

Scientific Development and Higher Education Philip G. Altbach, 1989-06-26 This is the first book to provide detailed analysis of the relationship between higher education and scientific research in key Third World countries Focusing on four of the most successful of the newly industrializing countries Malaysia Taiwan South Korea and Singapore the authors examine the intersection between outstanding economic development in these four countries and the higher education and research establishments they have developed The study combines careful analysis of the current status of scientific research in higher education with detailed ethnographic case studies of scientific work Based upon a two year research effort sponsored by the National Science Foundation the study presents a multifaceted approach to the subject evaluating for each country the organization of the universities and other scientific institutions the scientists and administrators who work in these institutions the research productivity and the relationship of basic research to applied uses in industry and commerce the interactions of these institutions with scholars from Western Europe Japan and North America The authors demonstrate that the nations under study are rapidly building a sophisticated scientific infrastructure and clearly recognize the importance of science for development The book concludes with an enlightening discussion of how scientists publish their findings in these countries
