An Engineer's Journey - Revised Stanley D. Kaplan, 2016-09-06 An Engineer's Journey From Structural Design to Analysis of Construction Failures is a set of professional articles some previously published some included in this book in draft form Consolidated into a mostly chronological order these documents constitute a part technical memoir part personal and professional biography It has been a journey as Stanley Kaplan's professional life spanned the three countries he has called home South Africa Israel and the United States It has also been a journey philosophically as his work evolved from structural engineering to the application of a general systems theory for the construction industry and then to extensive work in analyzing the causes of construction failures in insurance claims The more he researched case studies of construction failures and claims the more evident it became that a significant part of the problems that are prevalent in the construction industry stem from the shortcomings of human behavior throughout the construction process from inception to completion

Funicular Structures Damon Bolhassani, 2025-04-16 Funicular structures are structural skeletons designed using methodologies that analyze the flow and direction of forces which can be categorized as compression tension or a combination of both They are not only elegant resembling naturally occurring forms but also highly efficient and can be built with minimal use of relatively low strength materials thus minimizing their negative environmental impact This book presents an in depth overview of the theoretical foundations and practical methods of designing funicular structures for maximum efficiency Beginning with a foundation and introduction to funicular structures for those new to the subject the book then provides in depth coverage of cables arches shells and vaults domes and spatial structures Chapters explain the theory behind funicular structures in 2D spatial funicular structures in 3D and examine their structural behavior Recent and historically famous structures from around the globe are analyzed and their potential design methods revealed through step by step visual explanations Structural analysis of funicular structures in different forms are also presented to demonstrate pitfalls and common errors Tracing the various methods of designing funicular structures including the latest computational tools this book provides a solid foundation for students of architecture structural design civil engineering landscape design and environmental design to embark on their own funicular design projects

Civil Engineering - Volume I Kiyoshi Horikawa, Qizhong Guo, 2009 Civil Engineering is the component of Encyclopedia of Physical Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Civil Engineering is the oldest of the engineering specialties and has contributed very much to develop our society throughout the long history of human life The advancement of civil engineering has therefore been closely related to that of civilization In this theme human activities on the earth from ancient times to the present are briefly reviewed first and then the history of the process to establish the civil engineering discipline is discussed for better understanding of the important role that civil engineering has played in the growth of a mature society from both
