Frontiers of Expert Systems Chilukuri Krishna Mohan, 2013-11-10 The development of modern knowledge based systems for applications ranging from medicine to finance necessitates going well beyond traditional rule based programming Frontiers of Expert Systems Reasoning with Limited Knowledge attempts to satisfy such a need introducing exciting and recent advances at the frontiers of the field of expert systems Beginning with the central topics of logic uncertainty and rule based reasoning each chapter in the book presents a different perspective on how

we may solve problems that arise due to limitations in the knowledge of an expert system's reasoner. Successive chapters address i the fundamentals of knowledge based systems ii formal inference and reasoning about models of a changing and partially known world iii uncertainty and probabilistic methods iv the expression of knowledge in rule based systems v evolving representations of knowledge as a system interacts with the environment vi applying connectionist learning algorithms to improve on knowledge acquired from experts vii reasoning with cases organized in indexed hierarchies viii the process of acquiring and inductively learning knowledge ix extraction of knowledge nuggets from very large data sets and x interactions between multiple specialized reasoners with specialized knowledge bases. Each chapter takes the reader on a journey from elementary concepts to topics of active research providing a concise description of several topics within and related to the field of expert systems with pointers to practical applications and other relevant literature.

Frontiers of Expert Systems Reasoning with Limited Knowledge is suitable as a secondary text for a graduate level course and as a reference for researchers and practitioners in industry.

Expert Systems, 1993 *Expert Systems* is devoted to all aspects of artificial intelligence and advanced computing. It acts as a forum for the expert systems and neural networks community increasing awareness of what these technologies are and of the potential they have for decision makers in industry, business and government. The journal covers the development and use of advanced computing in areas which humans find intellectually difficult which involve expertise or specialized knowledge and which are the subject of continuing research or are of interest to those implementing current systems. Subjects discussed fall into one or more of the following categories:

- 1 expertise and related topics such as knowledge acquisition via elicitation of machine learning knowledge representation and human decision making
- 2 software engineering for such systems and related topics such as neural nets genetic algorithms intelligent agents decision support systems and some aspects of intelligent user modelling and
- 3 case studies and analyses of successful and unsuccessful system use and factors affecting the acceptance of such systems

Expert Systems for Software Engineers and Managers S. David Hu, 2013-03-08 This book is written for software engineers software project leaders and software managers who would like to

introduce a new advanced software technology expert systems into their product Expert system technology brings into programming a new dimension in which rule of thumb or heuristic expert knowledge is encoded in the program In contrast to conventional procedural languages e g Fortran or C expert systems employ high level programming languages Le expert system shells that enable us to capture the judgmental knowledge of experts such as geologists doctors lawyers bankers or insurance underwriters Past expert systems have been more successfully applied in the problem areas of analysis and synthesis where the boundary of lo knowledge is well defined and where experts are available and can be identified Early successful applications include diagnosis systems such as MYCIN geological systems such as PROSPECTOR or design configuration systems such as XC ON These early expert systems were mainly applicable to scientific and engineering problems which are not theoretically well understood in terms of decisionmaking processes by their experts and which therefore require judgmental assessment The more recent expert systems are being applied to sophisticated synthesis problems that involve a large number of choices such as how the elements are to be compared These problems normally entailed a large search space and slower speed for the expert systems designed Examples of these systems include factory scheduling applications such as ISIS or legal reasoning applications such as TAXMAN
