Experimental Design For The Life Sciences:

Experimental Design for the Life Sciences Graeme Ruxton, Nick Colegrave, 2011 Providing students with clear and practical advice on how best to organise experiments and collect data so as to make the subsequent analysis easier and their conclusions more robust this text assumes no specialist knowledge

Experimental Design for the Life Sciences Graeme D. Ruxton, Nick Colegrave, 2006 *Experimental Design for the Life Sciences* teaches the reader how to effectively design experiments to ensure that today's students are equipped with the skills they need to be the researchers of tomorrow. With a refreshingly approachable and articulate style the book explains the essential elements of experimental design in clear practical terms so that the reader can grasp and apply even the most challenging concepts including power analysis and pseudoreplication.

Principles of Experimental Design for the Life Sciences Murray R. Selwyn, 1996-05-23 Let this down to earth book be your guide to the statistical integrity of your work. Without relying on the detailed and complex mathematical explanations found in many other statistical texts *Principles of Experimental Design for the Life Sciences* teaches how to design, conduct and interpret top notch life science studies. Learn about the planning of biomedical studies, the principles of statistical design, sample size estimation, common designs in biological experiments, sequential clinical trials, high dimensional designs and process optimization and the correspondence between objectives, design and analysis. Each of these important topics is presented in an understandable and non technical manner free of statistical jargon and formulas. Written by a biostatistical consultant with 25 years of experience *Principles of Experimental Design for the Life Sciences* is filled with real life examples from the author's work that you can quickly and easily apply to your own. These examples illustrate the main concepts of experimental design and cover a broad range of application areas in both clinical and nonclinical research. With this one innovative helpful book you can improve your understanding of statistics, enhance your confidence in your results and at long last shake off those statistical shackles.

Experimental Design For The Life Sciences 2e Graeme D. Ruxton, 2006

Designing Experiments for the Social Sciences Renita Coleman, 2018-08-27 *Designing Experiments for the Social Sciences: How to Plan, Create and Execute Research Using Experiments* is a practical applied text for courses in experimental design. The text assumes that students have just a basic knowledge of the scientific method and no statistics background is required. With its focus on how to effectively design experiments rather than how to analyze them, the book concentrates on the stage where researchers are making decisions about procedural aspects of the experiment before interventions and treatments are given. Renita Coleman walks readers step by step on how to plan and execute experiments from the beginning by discussing choosing and collecting a sample, creating the stimuli and questionnaire, doing a manipulation check or pre test, analyzing the data and understanding and interpreting the results. Guidelines for deciding which elements are best used in the creation of a particular kind of experiment are also given. This title offers rich pedagogy, ethical considerations and examples pertinent to all social science disciplines.
