Experimental Design Visual Methods And Systematic Play:

Experimental Design Armin Lindauer, Betina Müller, 2015 How can experimentation and methodology be used in design processes In this area of specialization in particular the term experimental is often used rather randomly Contrary to this approach this book shows that even in art and design methodical experiments can result in concepts and ideas i e creativity in the widest sense In the chapters Basis Interpretation Variation Relation and Sequence a great number of design methods are categorized and typified The varied and often surprising results are due not least to the many different applied methods For a decade Armin Lindauer and Betina Müller researched collected and created works whose experimental methods result in creative design solutions The works were found in very diverse sectors such as advertising product design poster design art and sciences The book features historically significant works by Courbet Monet Jawlensky Picasso Albers and the Bechers as well as works of famous contemporary designers such as Daniele Buetti Peter Dreher Günther Kieser Uwe Loesch or Stefan Sagmeister With its more than 3000 images *Experimental Design* is a visual reference book for anyone interested in methodical approaches to ideas and concepts *Handbook of Special Education Research, Volume I* Thomas W.

Farmer, Elizabeth Talbott, Kristen McMaster, David Lee, Terese C. Aceves, 2022-05-10 Divided into two volumes *Handbook of Special Education Research* provides a comprehensive overview of critical issues in special education research This first volume addresses key topics in theory methods and development exploring how these three domains interconnect to build effective special education research Each chapter features considerations for future research and implications for fostering continuous improvement and innovation Essential reading for researchers and students of special education this handbook brings together diverse and complementary perspectives to help move the field forward **Optimizing Player Health, Recovery, and Performance in Basketball, volume II** Davide Ferioli, Aaron T. Scanlan, Daniele Conte, 2025-03-19 This Research Topic is the second volume of the article collection *Optimizing Player Health Recovery and Performance in Basketball* Please see the first volume here In line with the first volume basketball is a popular team sport played all over the world by male and female players participating in various competitions As the game continues to evolve there are new challenges and opportunities being faced by teams Consequently basketball organizations constantly seek competitive advantages that optimize the health recovery and performance of players through various practices The growing body of basketball research provides an essential evidence base for basketball organizations to draw upon when implementing different practices As such it is important that sound basketball research with strong practical translation is produced on topics relevant to player health recovery and performance In this regard examination of coaching training testing monitoring nutrition recovery injury prevention psychological performance analysis and sleep strategies as well as technological innovations that can improve the existing understanding and practices in basketball would prove advantageous for basketball coaches high performance staff and players alike **Methodological Quality of Interventions in Psychology** Salvador

Chacón-Moscoso, Susana Sanduvete-Chaves, Jason C. Immekus, 2017-08-16 Evaluations of intervention programs seek to present high quality design measures and data to assess their merit and worth. While evaluations differ in their purpose, theoretical framework and methodology, their collective aim is to obtain relevant and meaningful information to inform practice, research and policy. As such, evaluation findings serve to build a body of knowledge on effective approaches to promote designated psychological outcomes critical to an individual's overall health and well-being. However, as examined in this e-book, methodological weaknesses directly limit the potential of evaluations of intervention programs. As discussed by Chacón-Moscoso and Sanduvete-Chaves, methodological weaknesses can be attributed to how to define and measure methodological quality and the contextual dependency of instruments designed to measure this quality. In response, this e-book provides a collection of studies on methodological approaches to promote the quality of psychological interventions. Specifically, 10 original works published in the Research Topic Methodological Quality of Interventions in Psychology are included. The papers are organized into two chapters. Concretely, Chapter 1 includes studies pertaining to methodological approaches to enhance the quality of psychological intervention, being context-independent solutions. Furthermore, Chapter 2 presents original work in different areas: health, education, sport and social welfare, where methodological quality has been better assessed. Collectively, the papers in this e-book serve to expand the awareness of practitioners and researchers interested in psychological interventions of the critical role of methodological quality in this work. This research was funded by the projects 1150096 Chilean National Fund of Scientific and Technological Development FONDECYT and PSI2015-71947-REDT Spain's Ministry of Economy and Competitiveness.

Identifying Neuroimaging-Based Markers for Distinguishing Brain Disorders Yuhui Du, Jing Sui, Dongdong Lin, 2020-07-10 There has been increasing interest in exploring biomarkers from brain images aiming to have a better understanding and a more effective diagnosis of brain disorders such as schizophrenia, bipolar disorder, schizoaffective disorder, autism spectrum disorder, attention deficit hyperactivity disorder, Alzheimer's disease and so on. Therefore, it is important to identify disease-specific changes for distinguishing healthy controls and patients with brain disorders as well as for differentiating patients with different disorders showing similar clinical symptoms. Biomarkers can be identified from different types of brain imaging techniques including functional magnetic resonance imaging (fMRI), structural MRI, positron emission tomography (PET), electroencephalography (EEG) and magnetoencephalography (MEG) by using statistical analysis methods. Furthermore, based on measures from brain imaging techniques, machine learning techniques can help to classify or predict disease for individual subjects. In fact, fusion of features from multiple modalities may benefit the understanding of disease mechanism and improve the classification performance. This Research Topic further explores the functional or structural alterations in brain disorders.
