Explaining Science A Cognitive Approach Science And Its Conceptual Foundations:

Explaining Science Ronald N. Giere, 2010-12-15 This volume presents an attempt to construct a unified cognitive theory of science in relatively short compass It confronts the strong program in sociology of science and the positions of various postpositivist philosophers of science developing significant alternatives to each in a readily comprehensible style It draws loosely on recent developments in cognitive science without burdening the argument with detailed results from that source The book is thus a provocative one Perhaps that is a measure of its value it will lead scholars and serious student from a number of science studies disciplines into continued and sharpened debate over fundamental questions Richard Burian *Isis* The writing is delightfully clear and accessible On balance few books advance our subject as well Paul Teller *Philosophy of Science*

The Bloomsbury Handbook of the Philosophy of the Historical Sciences and Big History Aviezer Tucker, David Cernín, 2025-08-21 This handbook examines the philosophy of the historical sciences and their synthesis in concepts like Big or Deep History Written by interdisciplinary philosophers historians and scientists it acts as a valuable guide for anybody interested in scientific knowledge of the deep past Big History and the philosophy of science The Bloomsbury Handbook of the Philosophy of the Historical Sciences and Big History is the first philosophical reference work to recognize that History is not what it used to be the historical sciences Deep History Big History and even the history of the Anthropocene have now expanded the scope of historiography beyond that of literate civilizations to cover all scientific inferences about the past from the Big Bang through the history of the planet and the history of life to the history of humanity Different views about the scope of History have ontological epistemic methodological explanatory ethical and educational reasons and implications The historical sciences and the knowledge they have generated are founded on theories of knowledge of the past epistemology of history The contributions in this book consider whether there are common epistemic properties to all the historical sciences that distinguish them from non historical or theoretical sciences The first part of the handbook examines the recent expansion of the scope of the historical sciences in Big History natural history global history and environmental history and older broader concepts of history like universal history and philosophy of history The second part of the handbook addresses the ontology and epistemology of the past including the basic concepts of the historical sciences such as origins the end of history determination and underdetermination contingency and necessity historical predictions and counterfactuals and historical pseudoscience The third part examines the philosophies of the special historical sciences historical linguistics textual criticism geology evolutionary biology systematics archaeology cosmology history of the environment and most significantly their integrations and combinations for example how genetics archaeology and historical linguistics have generated a whole new knowledge of deep human history This collection offers an overview of what the philosophy of the historical sciences is and is becoming for students and experts alike

The Structure of Interdisciplinary Science Rolf Hvidtfeldt, 2018-06-25 This book presents a novel approach to the analysis of

interdisciplinary science based on the contemporary philosophical literature on scientific representation The basic motivation for developing this approach is that epistemic issues are insufficiently dealt with in the existing literature on interdisciplinarity This means that when interdisciplinary science is praised as it often is it is far from clear to what extent this praise is merited at least if one cares about various more or less standardised measures of scientific quality To develop a more adequate way of capturing what is going on in interdisciplinary science the author draws inspiration from the rich philosophical literature on modelling idealisation perspectivism and scientific pluralism The discussion hereof reveals a number of critical pitfalls related to transferring mathematical and conceptual tools between scientific contexts which should be relevant and interesting for anyone actively engaged in funding evaluating or carrying out interdisciplinary science
