

EMC TIMEFINDER

To put in simple term, EMC TimeFinder is mirroring software that creates multiple copies of the standard mirror referred as the Business Continuous Volume (BCV). This allows one to run multiple business tasks at the same time. We can use this BCV as standard in case of a disaster, during backups or for any business purposes.

The principal device is known as the *standard device* and remains online for regular symmetrix operation from original production server. When we establish BCV with the standard device the relationship is now called *BCV pair*. After the establish operation, symmetrix retains changed track information of the BCVs. This way we can do an incremental establish instead of a full which consumes time.

By default we can establish up to 8 BCVs with the standard. The maximum can be set to 16. Refer to TimeFinder environment variables for more details on same.

Setting up a BCV

Let us first start with a basic setup. The usual sequence would be as follows.

- 1) Create the device group
- 2) Add a standard device to the device group
- 3) Add a BCV to the same Device Group (DG)
- 4) Establish the initial BCV pair explicitly
- 5) Split the BCV pair for any business purpose

Creating device group and adding devices to it is the pre requisite for establishing a BCV pair. Following commands show how. Also check is the new device group is listed.
