

## DNA Replication

Read the article DNA Polymerase – Keeping you cloned then annotate the diagram below showing the process of DNA replication.

Complete the following using the most appropriate words:

DNA replication involves the separation of the two \_\_\_\_\_ chains that make up the molecule. Firstly the double helix is opened up by an enzyme called \_\_\_\_\_. The points where the helix splits are called \_\_\_\_\_. To allow the helix to untwist without causing a tangled mess, one chain is broken by an enzyme called \_\_\_\_\_. One new strand of DNA is made by the enzyme known as \_\_\_\_\_ in a continuous process. On the other strand the enzyme works in the opposite direction making small sections of \_\_\_\_\_ DNA simultaneously. The sections are then joined together by the enzyme \_\_\_\_\_. Any incorrect paired bases are removed using the enzyme \_\_\_\_\_. As the new DNA contains half of the original DNA, the process is known as \_\_\_\_\_ replication.
