Giampapa, 2005-09-01 DNA is life's blueprint Our genetic inheritance for health and life expectancy is encoded in each of our DNA Throughout life DNA reproduces and replaces itself continually In optimal conditions DNA copies itself over and over again making perfect reproductions This is very close to the state that people are in when they are young and healthy As people age however their DNA is damaged continually by the environment diet and physical and emotional stress The DNA begins to reproduce poorly and ultimately stops reproducing completely The result is disease and aging Contrary to current thinking new research suggests that the body is not irreversibly programmed by a finite number of cell divisions to age and die but rather is built for longevity and self repair Moreover we can regulate which aging genes to switch off and which to switch on thereby altering how our genes are expressed and influencing how we age the quality of our health and how long we live In BREAKING THE AGING CODE you will learn not only about these scientific breakthroughs but also about applying this information to your life to grow old rather than age and live life better and longer than you could have ever imagined **The Longevity Code** Kris Verburgh, 2019-12-24 Slow down the aging process and live well for longer Do you know exactly how and why you age And what you can do whatever your current age to slow that process and have a longer healthier life In The Longevity Code medical doctor Kris Verburgh illuminates the biological mechanisms that make our bodies susceptible to heart attacks dementia diabetes and other aging related diseases With the facts laid out he provides the tools we need to slow down the aging process His scientifically backed Longevity Staircase outlines a simple yet innovative step by step method offering better health and a longer life span especially the crucial role of proper nutrition and exercise But diet and exercise might not be the only way to crack the longevity code With each passing day advances in biotechnology that were once the stuff of

science fiction are emerging Dr Verburgh discusses how new types of vaccines mitochondrial DNA CRISPR proteins and stem cells may help us slow and even reverse aging now and in the future and when paired with the right lifestyle lead to longer healthier lives than we've ever imagined
