White,2000 A spectral camera ALISS Ambient Light Imaging and Spectral System was used to image ambient light from high temperature vents at 9 N East Pacific Rise and the Juan de Fuca Ridge during 1997 and 1998 Alvin dive cruises ALISS is a low light digital camera with custom designed optics A set of nine lenses each covered by an individual bandpass filter 50 and 100 nm nominal bandwidths allows vents to be imaged in nine wavelength bands simultaneously spanning the range of 400 1 000 nm Thus both spatial and spectral information are obtained ALISS was used to image three types of vents black smokers flange pools and beehives The primary source of light is thermal radiation due to the high temperature of the hydrothermal fluid 350 C This light is dominant at wavelengths greater than 700 nm At flange pools where the fluid is relatively stable only thermal radiation is present Black smokers and beehives however are subject to mixing with ambient seawater 2 C leading to mineral precipitation Data from these types of vents show the existence of non thermal temporally varying light in the 400 700 nm region This light is probably caused by mechanisms related to mixing and precipitation such as chemiluminescence crystalloluminescence and triboluminescence Bibliography of Agriculture ,1992-07 □□□□ ,2008
