

Expert Systems

- Expert systems are AI programs that solve a highly technical problem in some domain
- Normally a human expert is used for solving such problems.
- An expert system encodes a human expert's knowledge.
- Common areas:
 - medicine
 - science: chemistry, biology
 - engineering
 - agriculture
 - military
 - finance.

Design C. Tasso,G. Guida,2014-06-28 Expert Systems are so far the most promising achievement of artificial intelligence research Decision making planning design control supervision and diagnosis are areas where they are showing great potential However the establishment of expert system technology and its actual industrial impact are still limited by the lack of a sound general and reliable design and construction methodology This book has a dual purpose to offer concrete guidelines and tools to the designers of expert systems and to promote basic and applied research on methodologies and tools It is a coordinated collection of papers from researchers in the USA and Europe examining important and emerging topics methodological advances and practical experience obtained in specific applications Each paper includes a survey introduction and a comprehensive bibliography is provided **Artificial Intelligence and Expert Systems for Engineers**

C.S. Krishnamoorthy,S. Rajeev,2018-04-24 This book provides a comprehensive presentation of artificial intelligence AI methodologies and tools valuable for solving a wide spectrum of engineering problems What s more it offers these AI tools on an accompanying disk with easy to use software Artificial Intelligence and Expert Systems for Engineers details the AI based methodologies known as Knowledge Based Expert Systems KBES Design Synthesis Design Critiquing and Case Based Reasoning KBES are the most popular AI based tools and have been successfully applied to planning diagnosis classification monitoring and design problems Case studies are provided with problems in engineering design for better understanding of the problem solving models using the four methodologies in an integrated software environment Throughout the book examples are given so that students and engineers can acquire skills in the use of AI based methodologies for application to practical problems ranging from diagnosis to planning design and construction and manufacturing in various disciplines of engineering Artificial Intelligence and Expert Systems for Engineers is a must have reference for students teachers research scholars and professionals working in the area of civil engineering design in particular and engineering design in general

Database and Expert Systems Applications Kim V. Andersen,John Debenham,Roland Wagner,2005-08-11 DEXA 2005 the 16th International Conference on Database and Expert Systems Applications was held at the Copenhagen Business School Copenhagen Denmark from August 22 to 26 2005 The success of the DEXA series has partly been due to the way in which it has kept abreast of recent developments by spawning specialized workshops and conferences each with its own proceedings In 2005 the DEXA programme was co located with the 7th International Conference on Data Warehousing and Knowledge

Discovery DaWaK 2005 the 6th International Conference on Electronic Commerce and Web Technologies EC Web 2005 the 4th International Conference on Electronic Government EGOV 2005 the 2nd International Conference on Trust Privacy and Security in Digital Business TrustBus 2005 the 2nd International Conference on Industrial Applications of Holonic and Multi agent Systems HoloMAS 2005 as well as 19 specialized workshops These proceedings are the result of a considerable amount of hard work Beginning with the preparation of submitted papers the papers went through the reviewing process This process was supported by online discussion between the reviewers to determine the final conference program The authors of accepted papers revised their manuscripts to produce this fine collection DEXA 2005 received 390 submissions and from those the Program Committee selected the 92 papers in these proceedings This year the reviewing process generated more than 1000 referee reports The hard work of the authors the referees and the Program Committee is gratefully acknowledged

Database and Expert Systems Applications Heinrich C. Mayr, Jiri Lazansky, Gerald Quirchmayr, Pavel Vogel, 2003-06-29 th DEXA 2001 the 12 International Conference on Database and Expert Systems Applications was held on September 3 5 2001 at the Technical University of Munich Germany The rapidly growing spectrum of database applications has led to the establishment of more specialized discussion platforms DaWaK conference EC Web conference and DEXA workshop which were all held in parallel with the DEXA conference in Munich In your hands are the results of much effort beginning with the preparation of the submitted papers The papers then passed through the reviewing process and the accepted papers were revised to final versions by their authors and arranged with the conference program All this culminated in the conference itself A total of 175 papers were submitted to this conference and I would like to thank all the authors They are the real base of the conference The program committee and the supporting reviewers produced altogether 497 referee reports on average of 2 84 reports per paper and selected 93 papers for presentation Comparing the weight or more precisely the number of papers devoted to particular topics at several recent DEXA conferences an increase can be recognized in the areas of XMS databases active databases and multi and hypermedia efforts The space devoted to the more classical topics such as information retrieval distribution and Web aspects and transaction indexing and query aspects has remained more or less unchanged Some decrease is visible for object orientation

Frontiers of Expert Systems Chilukuri K. Mohan, 2000-05-31 Beginning with the central topics of logic uncertainty and rule based reasoning each chapter in the book presents a different perspective on how we may solve problems that arise due to limitations in the knowledge of an expert system's reasoner

Frontiers of Expert Systems Chilukuri Krishna Mohan, 2013-11-10 The development of modern knowledge based systems for applications ranging from medicine to finance necessitates going well beyond traditional rule based programming Frontiers of Expert Systems Reasoning with Limited Knowledge attempts to satisfy such a need introducing exciting and recent advances at the frontiers of the field of expert systems Beginning with the central topics of logic uncertainty and rule based reasoning each chapter in the book presents a different perspective on how we may

solve problems that arise due to limitations in the knowledge of an expert system's reasoner. Successive chapters address i the fundamentals of knowledge based systems ii formal inference and reasoning about models of a changing and partially known world iii uncertainty and probabilistic methods iv the expression of knowledge in rule based systems v evolving representations of knowledge as a system interacts with the environment vi applying connectionist learning algorithms to improve on knowledge acquired from experts vii reasoning with cases organized in indexed hierarchies viii the process of acquiring and inductively learning knowledge ix extraction of knowledge nuggets from very large data sets and x interactions between multiple specialized reasoners with specialized knowledge bases. Each chapter takes the reader on a journey from elementary concepts to topics of active research providing a concise description of several topics within and related to the field of expert systems with pointers to practical applications and other relevant literature.

Frontiers of Expert Systems Reasoning with Limited Knowledge is suitable as a secondary text for a graduate level course and as a reference for researchers and practitioners in industry.

Expert Systems, 1993 *Expert Systems* is devoted to all aspects of artificial intelligence and advanced computing. It acts as a forum for the expert systems and neural networks community increasing awareness of what these technologies are and of the potential they have for decision makers in industry, business and government. The journal covers the development and use of advanced computing in areas which humans find intellectually difficult which involve expertise or specialized knowledge and which are the subject of continuing research or are of interest to those implementing current systems. Subjects discussed fall into one or more of the following categories:

1. expertise and related topics such as knowledge acquisition via elicitation of machine learning knowledge representation and human decision making
2. software engineering for such systems and related topics such as neural nets genetic algorithms intelligent agents decision support systems and some aspects of intelligent user modelling and
3. case studies and analyses of successful and unsuccessful system use and factors affecting the acceptance of such systems

Expert Systems for Software Engineers and Managers S. David Hu, 2013-03-08 This book is written for software engineers software project leaders and software managers who would like to

introduce a new advanced software technology expert systems into their product Expert system technology brings into programming a new dimension in which rule of thumb or heuristic expert knowledge is encoded in the program In contrast to conventional procedural languages e g Fortran or C expert systems employ high level programming languages Le expert system shells that enable us to capture the judgmental knowledge of experts such as geologists doctors lawyers bankers or insurance underwriters Past expert systems have been more successfully applied in the problem areas of analysis and synthesis where the boundary of lo knowledge is well defined and where experts are available and can be identified Early successful applications include diagnosis systems such as MYCIN geological systems such as PROSPECTOR or design configuration systems such as XC ON These early expert systems were mainly applicable to scientific and engineering problems which are not theoretically well understood in terms of decisionmaking processes by their experts and which therefore require judgmental assessment The more recent expert systems are being applied to sophisticated synthesis problems that involve a large number of choices such as how the elements are to be compared These problems normally entailed a large search space and slower speed for the expert systems designed Examples of these systems include factory scheduling applications such as ISIS or legal reasoning applications such as TAXMAN
