

# Theory

- Epidemiological purposes and theories underpin measurement, presentation and interpretation of data
- The capacity to measure and analyse data also alters our theories e.g. the case-control study and the odds ratio are now inextricably intertwined
- Interpretation of data is influenced by investigators' philosophy on the nature of knowledge (epistemology)
- Epidemiologists practice positivism, the philosophic system that is based on facts, acquired by empirical observations, and logic
- Facts are extracted by analysis and interpretation from data that are invariably flawed
